(Incorporating Amendments up to and including No. 2)

Australian STANDARD®

STANDARDS Australia

Performance of household electrical appliances — Swimming pool pump-units

Part 1: Measurement of energy consumption and performance

AS 5102.1:2019

This Australian Standard® was prepared by EL-058, Energy Efficiency for Swimming Pool pumps. It was approved on behalf of the Council of Standards Australia on 09 October 2019.

This Standard was published on 7 November 2019.

The following are represented on Committee EL-058:

Australian Industry Group
Consumer Electronics Suppliers Association
Department of the Environment and Energy (Australian Government)
Electrical Compliance Testing Association of Australia
Energy Networks Australia
Engineers Australia
International Copper Association Australia
Swimming Pool and Spa Association of Australia

This Standard was issued in draft form for comment as DR AS 5102.1:2019.

Preface

This Standard was prepared by the Australian members of the Joint Standards Australia/Standards New Zealand Committee EL-058, Energy Efficiency for Swimming Pool Pumps, to supersede AS 5102.1—2009, *Performance of household electrical appliances — Swimming pool pump-units, Part 1: Energy consumption and performance*.

This Standard incorporates Amendment No. 1 (May 2022) and Amendment No. 2 (September 2023). The start and end of changes introduced by the Amendments are indicated in the text by tags including the Amendment numbers 1 and 2.

The objective of this Standard is to describe procedures to determine the energy consumption, energy efficiency and sound levels of swimming pool pump units.

The major changes in this edition are as follows:

(a) Change in title and scope.

(b) Classification of single-speed, two-speed, multi-speed and variable speed pump units.

(c) Specification of input power range for pump-units covered by this Standard.

(d) Introduction of weighted energy factor based on high flow rate and low flow rate measured performance to characterize multi-speed and variable speed pump units.

(e) Pump unit performance now directly measured while operating on a specified hydraulic resistance curve.

(f) Modification of construction and operation of the hydraulic circuit.

(g) Change of instrumentation error specifications.

(h) Specification of operating procedure needed to achieve pump unit operation on the required hydraulic resistance curve.

(i) Introduction of weighted energy factor uncertainty quantification.

(j) Change of reporting requirements.

The terms “normative” and “informative” are used in Standards to define the application of the appendices to which they apply. A “normative” appendix is an integral part of a Standard, whereas an “informative” appendix is only for information and guidance.

Amendment control sheet **36**

Introduction

Swimming pool pump units are significant users of electricity in homes where swimming pools are installed.

The desire of governments to improve the energy efficiency of appliances has led to the development of energy labelling and Minimum Energy Performance Standards (MEPS) for a range of products. This Standard describes measurements and analysis of data required for energy labelling and MEPS for swimming pool pump units.

Energy labelling and MEPS requirements are set out in the *Greenhouse and Energy Minimum Standards (Swimming pool pump-units) Determination*.

NOTES

Australian Standard®

Performance of household electrical appliances — Swimming pool pump-units

Part 1: Measurement of energy consumption and performance

Section 1 Scope and general

1.1 Scope

This Standard specifies requirements for the determination of energy consumption of swimming pool pump units operating on single-phase electricity.

This Standard also specifies the classification of swimming pool pump units, requirements for the test facility, the test procedure and method of calculation and presentation of results.

This Standard applies to swimming pool pump units —

(a) that are capable of a flow rate equal to or greater than 120 L/min; and

(b) that have an input power range of —

  (i) single-speed pump units — 600 W to 1 700 W; or

  (ii) two-speed, multi-speed and variable speed pump units — 600 W to 3 450 W; and

(c) that are used for the circulation of water through —

  (i) pool filters, sanitization devices, cleaning devices, or water heaters (including solar); or

  (ii) spa or jet outlets or other features forming part of a pool.
