AS 5804.1:2025

Australian STANDARD®

STANDARDS Australia

High-voltage live work

Part 1: General

AS 5804.1:2025

This Australian Standard® was prepared by EL-052, Electrical Energy Networks, Construction and Operation. It was approved on behalf of Standards Australia's Standards Development and Accreditation Committee on 11 June 2025.

This Standard was published on 27 June 2025.

The following are represented on Committee EL-052:

Communications, Electrical and Plumbing Union - Electrical Division
Department of Primary Industries and Regional Development
Electric Energy Society of Australia
Electrical Regulatory Authorities Council, Australia
Energy Networks Australia
Engineers Australia
National Electrical and Communications Association

This Standard was issued for comment as DR AS 5804.1:2024

Australian Standard®

High-voltage live work

Part 1: General

Originated as AS 5804.1—2010.
Second edition AS 5804.1:2025.

How to read this Standard

This page explains the meaning of the language and structure of this Standard.

Refer to Standards Australia's Standardisation Guide 006 for more details about drafting rules.

Australian and Australian/New Zealand Standards are voluntary unless they are referenced in legislation or called up in contracts.

Requirements

To conform to a Standard, all requirements in the Standard need to be met.

A requirement is any statement in the Standard which uses the word "shall".

Recommendations, permissions and possibilities

The following words are commonly used in Standards, but statements using them do not have to be followed to conform to the Standard:

(a) "should" means that something is recommended.

(b) "may" means that something is permitted.

(c) "can" means that something is possible.

Structure of Standards

A Standard always has the following parts:

(i) The Preface states who developed the Standard, what the Standard is aiming to do, and how it relates to other documents.

(ii) The Scope states what the Standard is about, what it covers and what it does not cover.

(iii) The Normative references clause lists other documents that are referenced in the Standard as part of requirements.

(iv) The Terms and definitions clause defines important terms to help with understanding the Standard.

A Standard may also include other parts, such as the following:

(1) A normative appendix sets additional requirements that need to be conformed to.

(2) An informative appendix provides additional information or guidance. An informative appendix provides additional information or guidance. They usually do not contain requirements. If an informative appendix does contain requirements, the Standard will explain when those requirements apply.

(3) A Bibliography lists documents referenced in the Standard but not as part of requirements.

Many Standards include notes. Notes provide recommendations and/or guidance only. They never contain requirements.

Preface

This Standard was prepared by the Australian members of the joint Standards Australia/Standards New Zealand Committee EL-052, Electrical Energy Networks, Construction and Operation, to supersede AS 5804.1:2010, *High-voltage live working, Part 1: General*.

After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to continue to develop this document as an Australian Standard rather than an Australian/New Zealand Standard.

The objective of this document is to establish the minimum requirements for high-voltage live stick work to safeguard live workers and the public and to align live work requirements with current industry practices and advancements in technology.

This document forms part of the AS 5804 series on high voltage live work. A list of all parts in this series can be found in the Standards Australia online catalogue.

It is intended that this document be read in conjunction with AS 5804.2, AS 5804.3 and AS 5804.4.

The major changes in this edition are as follows:

(a) Significant update of the live work equipment management requirements including the electrical and mechanical testing requirements for in-service live work equipment.

(b) Alignment with ENA DOC 049 and ENA DOC 050 which reflect current industry best practice for the testing and maintenance of live work equipment.

(c) Consolidation of the periodic electrical testing intervals and reference Standards previously specified in the AS 5804 series into Table 12.14.3 of this document.

The inclusion of roles and responsibilities in AS 5804.1 was approved by Standards Australia's Production Management Group on 18/04/2024.

The terms “normative” and “informative” are used in Standards to define the application of the appendices to which they apply. A “normative” appendix is an integral part of a Standard, whereas an “informative” appendix is only for information and guidance.

Preface ..... **v**

Introduction ..... **x**

1 Scope and general **1**
1.1 Scope 1
1.2 Application 1
1.3 Normative references 2
1.4 Terms and definitions 2
1.5 Responsibilities 9
1.5.1 General 9
1.5.2 Network operator and service provider 9
1.5.3 On-site controller 10
1.5.4 Safety observer 10
1.5.5 Team members 11

2 Live work methods **11**
2.1 General 11
2.2 Glove and barrier method 11
2.3 Stick work method 11
2.4 Barehand method 11

3 Risk assessment **11**
3.1 General 11
3.2 Pre-job hazard and risk assessment 12
3.3 Known hazards 13

4 Live work personnel **13**
4.1 Selection criteria 13
4.2 Medical assessment 13
4.2.1 General 13
4.2.2 Initial medical assessment 13
4.2.3 Ongoing regular medical assessment 13
4.3 Workplace health issues 14
4.4 Initial training and competency assessment 14
4.4.1 Training and assessment 14
4.4.2 Competency assessment 14
4.4.3 Refresher training 15
4.5 People working with a live work team 15

5 Work documentation **15**
5.1 General 15
5.2 Procedures and techniques 15
5.3 Documentation 15
5.3.1 General 15
5.3.2 Live work manual 16
5.3.3 Live work permit 16
5.3.4 Approved work documentation 17
5.3.5 Minor changes to work procedure on-site 17
5.4 Records 17

6 Safe working principles **17**
6.1 General 17
6.2 Work on adjacent structures and spans 17
6.3 Combination live work and access authority work 17
6.4 Integrity of insulation 18
6.5 Inspection of insulators 18
6.6 Restraint of free ends of harness straps, pole straps and ropes 18
6.7 Worksite electrical apparatus assessment 18
6.8 Safety observers 18

© Standards Australia Limited 2025

6.8.1 Safety observer 18
6.8.2 Team members 19
6.9 Work team communications 19
6.9.1 Communication with the system controller 19
6.9.2 Communication between work team members 19
6.10 Weather conditions 19
6.11 Traffic management 20
6.12 Step and touch potential 20
6.13 Protective devices 20
6.13.1 Operation of protective devices 20
6.13.2 Disabling of auto-reclose function 20
6.13.3 A manual reclose or other planned switching of a circuit 20
6.14 Plant earthing 21
6.15 Public safety 21
6.16 Personal protection 21
6.16.1 Wearing metallic objects 21
6.16.2 Hair length 21
6.16.3 Personal protective equipment 21
6.17 Procedures in the event of an incident/accident 21
6.17.1 Events constituting an incident or accident 21
6.17.2 Procedures for responding to live work incidents or accidents 22
6.18 Post-job assessment 22
6.19 Safe working principles for substations 22

7 Insulation and voltage 22
7.1 General 22
7.2 Insulating materials 23
7.3 High-voltage insulators 23
7.3.1 General 23
7.3.2 Handling of insulators exhibiting physical damage or electrical distress 23
7.3.3 Minimum number of electrically sound disc insulators 23
7.3.4 Testing of insulator strings 24
7.3.5 Minimum number of electrically sound discs not available 25
7.3.6 Capacitive charge on disc insulators 25
7.4 Porcelain disc insulators 25
7.5 Glass disc insulators 26
7.6 Non-ceramic insulators 26
7.6.1 General 26
7.6.2 Installation of new insulators 26
7.6.3 Handling of non-ceramic insulators 26
7.6.4 Assessment of non-ceramic insulators 26
7.7 Potential abnormal voltage conditions 26
7.7.1 General 26
7.7.2 Ferro-resonance 26
7.7.3 Ferranti effect 27
7.7.4 Lightning and backflash 27
7.7.5 Resonant earth system 28
7.7.6 Neutral earth resistor and neutral earth reactor 28

8 Current and conductors 28
8.1 General 28
8.2 Elevated conductor temperature 28
8.3 Current and switching 29
8.4 Conductors and controlled movement 29

9 Electromagnetic fields 30
9.1 General 30
9.2 Electric fields 30
9.3 Magnetic fields 30
9.4 Electromagnetic field management 30

10 Minimum approach distance 30
10.1 General 30
10.2 Insulation based on air 31
10.3 Minimum approach distance based on air 31
10.3.1 Calculation 31
10.3.2 Electrical factor 32
10.3.3 Ergonomic distance 32
10.4 Recommended minimum approach distance 32
10.5 Conditions applicable to Tables 10.4(A) and 10.4(B) 34
10.6 Decreasing the minimum approach distance 35
10.7 Increasing the minimum approach distance 35
10.7.1 Ergonomic distance 35
10.7.2 Individual factors related to the live worker 36
10.7.3 Environmental factors 36
10.8 Minimum approach distances for mobile plant 36
10.8.1 General 36
10.8.2 Variations to minimum approach distances 38

11 Equipment 39
11.1 General 39
11.2 Electrical rating of insulating equipment 40
11.3 Contamination 40
11.4 Insulation maintenance 40
11.5 Electrical properties of tools and equipment 40
11.5.1 Categories of insulating materials 40
11.5.2 Current associated with personal protective or cover-up tools and equipment .. 41
11.5.3 Current associated with support, lift, or reach-extending tools and equipment .. 41
11.5.4 Maximum permissible current 41
11.6 Live work sticks 41
11.7 Gloves and sleeves 41
11.8 Insulating barriers 42
11.8.1 General 42
11.8.2 Types of insulating barriers 42
11.9 Conductor support equipment 42
11.10 Rope 42
11.10.1 Properties of rope for live work 42
11.10.2 Types of rope in use 42
11.11 Elevating work platforms 43
11.11.1 Use of elevating work platforms 43
11.11.2 Supporting energized components 43
11.11.3 Uninsulated parts of the elevating work platforms 44
11.11.4 Earthing and bonding of the chassis of the elevating work platforms 44
11.11.5 Elevating work platforms for live high-voltage work 44
11.12 Crane operations 45
11.12.1 General 45
11.12.2 Instruction of crane operators 45
11.12.3 Supervision of crane operators 45
11.12.4 Supporting energized components 45
11.12.5 Uninsulated parts of the crane 45
11.12.6 Earthing and bonding of the chassis of the crane 45
11.12.7 Operation of multiple plant items on the same site 45
11.13 Insulating positioning towers 45
11.14 Personal protective equipment 45
11.14.1 General principles 45
11.14.2 Safety footwear 46
11.14.3 Eye and face protection 46
11.14.4 Head protection 46
11.14.5 Protective clothing 46
11.14.6 Additional outer clothing 47

Introduction

This document has its origins in the former Electricity Supply Association of Australia (ESAA) documents:

(a) HB ESAA LLM 01—2000, Guidelines for live line barehand work.

(b) HB ESAA LLM 02—2000, Guidelines for live line stick work.

(c) HB ESAA LLM 03—2000, Guidelines for live line glove and barrier work.

(d) ESAA ND/NL 04—1995, Guidelines for use of helicopters for live line work.

All but ESAA ND/NL 04—1995 were later published as Energy Networks Association (ENA) documents but have now been withdrawn.

This document does not constitute a high-voltage live work manual or set down high-voltage live work procedures and techniques. All procedures and techniques are developed by the network operator and service provider in accordance with this document.
