STANDARDS Australia

Microbiology of the food chain — General requirements and guidance for microbiological examinations

AS ISO 7218:2025

This Australian Standard® was prepared by FT-035, Food Microbiology. It was approved on behalf of Standards Australia's Standards Development and Accreditation Committee on 26 February 2025.

This Standard was published on 14 March 2025.

The following are represented on Committee FT-035:

ACT Health Directorate
Australian Society for Microbiology
CSIRO
Dairy Industry Association of Australia
Department of Agriculture, Fisheries and Forestry
Department of Health (TAS)
National Association of Testing Authorities Australia
National Measurement Institute
PathWest Laboratory Medicine WA
Queensland Health Forensic and Scientific Services
The University of Melbourne
Victorian Department of Health

This Standard was issued in draft form for comment as DR AS ISO 7218:2025.

Preface

This Standard was prepared by the Standards Australia Committee FT-035 Food Microbiology.

The objective of this document is to specify general requirements and gives guidance on microbiological examinations.

It is applicable to:

— the implementation of specific horizontal or vertical International Standards developed by ISO/TC 34/SC 9 or ISO/TC 34/SC 5 for detection or enumeration of microorganisms, named hereafter “specific standards”;

— good laboratory practices for microbiology laboratories testing samples from the food chain; and

— guidance for microbiological laboratories testing samples from the food chain on the technical requirements for conforming to ISO/IEC 17025.

The requirements of this general standard supersede corresponding ones in existing specific standards.

This document is identical with, and has been reproduced from, ISO 7218:2024, *Microbiology of the food chain — General requirements and guidance for microbiological examinations*.

As this document has been reproduced from an international document, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

6.2 Sterilization and other heating equipment 11
6.2.1 General 11
6.2.2 Autoclave 11
6.2.3 Culture media preparator 12
6.2.4 Steamers, including boiling-water baths 13
6.2.5 Sterilizing oven 13
6.2.6 Microwave oven 14
6.2.7 Hotplate, induction cooker and heating mantle 15
6.2.8 Gas burner or wire incinerator 15
6.3 Temperature controlled equipment and monitoring devices 16
6.3.1 General 16
6.3.2 Incubator 16
6.3.3 Thermostatically controlled bath 17
6.3.4 Heating blocks 18
6.3.5 Refrigerators and cold-storage rooms 19
6.3.6 Freezer and deep freezer/ultra-low temperature freezer 20
6.3.7 Temperature-monitoring devices, including automatic recorders 20
6.3.8 Balances and gravimetric diluters 21
6.4 Defined volume inoculation equipment 22
6.4.1 Pipettes and pipettors 22
6.4.2 Dispensers 23
6.4.3 Spiral platers 24
6.4.4 Serial diluters 25
6.5 Protective cabinets 25
6.5.1 Description 25
6.5.2 Use 26

6.5.3 Cleaning and disinfection 27
6.5.4 Maintenance and inspection 27
6.6 Homogenizers, blenders, mixers and shakers 27
6.6.1 Homogenizers and blenders 27
6.6.2 Vortex mixers 28
6.7 Stills, deionizers and reverse-osmosis units 29
6.7.1 Description 29
6.7.2 Use 29
6.7.3 Maintenance 29
6.7.4 Verification 29
6.8 Separation and concentration equipment 29
6.8.1 Immunomagnetic separator (IMS) 29
6.8.2 Centrifuge 30
6.8.3 Filtration systems 30
6.9 Modified atmosphere equipment 30
6.9.1 Description 30
6.9.2 Use 31
6.9.3 Maintenance 31
6.9.4 Verification 31
6.10 Other equipment 31
6.10.1 pH meter 31
6.10.2 Colony-counting device 32
6.10.3 Timers and timing devices 33
6.10.4 Optical microscope 33
6.10.5 Glass washers, glassware and other laboratory ware 34
6.10.6 Disposable equipment and consumables 35
6.10.7 Other equipment and software 35

7 Sterilization/decontamination and disposal of laboratory materials 35
7.1 Sterilization 35
7.1.1 General 35
7.1.2 Sterilization by dry heat 35
7.1.3 Sterilization by moist heat (steam) 35
7.2 Decontamination and disinfection 36
7.2.1 Decontamination of glassware and materials before use 36
7.2.2 Decontamination of glassware and materials after use 36
7.3 Waste management 36
7.4 Washing 37

8 Preparation and use of culture media and reagents 37

9 Laboratory samples 37
9.1 Sampling techniques and sampling plans 37
9.1.1 General 37
9.1.2 Sampling 37
9.2 Sample transport 38
9.3 Sample receipt 38
9.4 Sample handling 39
9.4.1 General 39
9.4.2 Storage before examination 39
9.4.3 Test portions 39
9.4.4 Storage of laboratory samples after examination 39
9.5 Pre-testing of samples 40

10 Examination 40
10.1 Hygienic precautions during sample preparation and examination 40
10.1.1 General 40
10.1.2 Basic precautions 40
10.1.3 Sample handling 41
10.1.4 Sample handling tools and implements 41

10.1.5 Spillages 41
10.1.6 Process controls 41
10.1.7 Aerosols 42
10.1.8 Molecular methods 42
10.2 Preparation of initial suspension and dilutions 42
10.2.1 General 42
10.2.2 Concentration 42

11 Enumeration (quantitative) methods 43
11.1 General 43
11.2 Enumeration using a solid medium 43
11.2.1 General 43
11.2.2 Pour plate technique 44
11.2.3 Surface plating techniques 44
11.2.4 Enumeration of yeasts and moulds 46
11.2.5 Incubation 46
11.2.6 Calculation and expression of results obtained with solid culture media 47
11.2.7 Calculations for enumeration methods 49
11.3 Enumeration using liquid media 56
11.3.1 Principle 56
11.3.2 General MPN procedure 56
11.3.3 Limitations of MPN 56
11.3.4 Inoculation procedure 57
11.3.5 Choice of MPN configuration 57
11.3.6 Incubation 58
11.3.7 Interpretation and expression of results 58
11.3.8 Determination of MPN values using MPN calculators 58
11.3.9 Rarity categories 59
11.4 Estimates of uncertainty of test results 60

12 Detection (qualitative) methods 60
12.1 General 60
12.2 Principle 60

13 Confirmation and identification methods 60
13.1 General 60
13.2 Preparation of a pure culture 61
13.3 Confirmation methods 61
13.3.1 Latex agglutination test 61
13.3.2 Nucleic acid hybridization or molecular amplification methods 62
13.3.3 Slide agglutination tests 62
13.4 Identification methods 62
13.4.1 Biochemical galleries 62
13.4.2 DNA sequencing 63
13.4.3 Mass spectrometry 63

14 Selection and characterization of control microorganisms 64
14.1 General 64
14.2 Characterization of microorganisms 64
14.2.1 General 64
14.2.2 Phenotypic characterization 64
14.2.3 Molecular characterization 64
14.3 Selection of control microorganisms 64

15 Test report 66

16 Laboratory quality control in microbiology 66
16.1 General 66
16.2 Internal quality control 67
16.2.1 General 67
16.2.2 Process controls 68

16.2.3 Replicate testing 69
16.2.4 Spiked samples 69
16.2.5 IQC assessment using control charts 69
16.3 External quality assessment 69
17 Validation and verification of microbiological methods 70
17.1 General 70
17.2 Performance characteristics 70
17.3 Validation 70
17.4 Verification 71

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 34, *Food products*, Subcommittee SC 9, *Microbiology*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 463, *Microbiology of the food chain,* in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This fourth edition cancels and replaces the third edition (ISO 7218:2007), which has been technically revised. It also incorporates the Amendment ISO 7218:2007/Amd 1:2013.

The main changes are as follows:

— the calculations section has been simplified and two further calculators have been added;

— the equipment section has been reorganized into groups with similar purposes and requirements;

— cross-references have been added to other general microbiology standards such as those for media, validation and verification, and uncertainty to reduce repetition;

— information on laboratory quality control and characterization of control microorganisms has been added.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

When conducting microbiological examinations, it is especially important that:

— only those microorganisms present in the samples are detected and/or enumerated;

— these microorganisms do not contaminate the environment.

To achieve this, good laboratory practices are essential, including personal hygiene and aseptic working techniques which exclude extraneous contamination as far as possible.

Only limited information on the precautions to be taken during microbiological examinations is given in this document, so a thorough knowledge of the microbiological techniques and microorganisms involved is essential. It is important that examinations are conducted safely, correctly and as carefully as possible, including monitoring and recording aspects that can affect results, calculating numbers of microorganisms and assessing the uncertainty of test results.

The most common risks and their control in the microbiological laboratory are given in this document. However, work processes in each laboratory can differ and appropriate risk analysis should be considered to ensure good laboratory practices. Periodic evaluation and control of critical points not only maintains safe and hygienic practices but can also improve reliability of test results.

The purpose of this document is to help to ensure the validity of microbiology examinations in the food chain. In particular, to ensure that general techniques for conducting examinations are the same in all laboratories, to achieve consistent results in different laboratories and to contribute to safety of laboratory personnel by preventing risks of infection.

This document includes the main measures necessary for conducting the wide range of microbiological examinations. Additional information is available from the literature listed in the Bibliography (see References [43] to [47]).

In this document, the following verbal forms are used:

— “shall” indicates a requirement;

— “should” indicates a recommendation;

— “may” indicates a permission;

— “can” indicates a possibility or a capability.

In addition, the imperative mood is used to give instructions or where actions are required.

Australian Standard®

Microbiology of the food chain — General requirements and guidance for microbiological examinations

1 Scope

This document specifies general requirements and gives guidance on microbiological examinations.

It is applicable to:

— the implementation of specific horizontal or vertical International Standards developed by ISO/TC 34/SC 9 or ISO/TC 34/SC 5 for detection or enumeration of microorganisms, named hereafter “specific standards”;

— good laboratory practices for microbiology laboratories testing samples from the food chain;

— guidance for microbiological laboratories testing samples from the food chain on the technical requirements for conforming to ISO/IEC 17025.

The requirements of this general standard supersede corresponding ones in existing specific standards.

Additional instructions for examinations using the polymerase chain reaction (PCR) are specified in ISO 22174.

This document is applicable to examinations for bacteria, yeasts and moulds and can be used, if supplemented with specific guidance, for parasites and viruses. It does not apply to examinations for toxins or other metabolites (e.g. amines) from microorganisms.

This document is applicable to microbiology of the food chain, from primary production stage to food and animal feed products, including the premises where the food or feed production and handling takes place. It is also applicable to the microbiological examination of water where water is used in food production or is regarded as a food in national legislation.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

— ISO Online browsing platform: available at https://www.iso.org/obp

— IEC Electropedia: available at https://www.electropedia.org/

3.1
food chain
sequence of the stages in the production, processing, distribution, storage and handling of a *food* (3.2) and its ingredients, from primary production to consumption

Note 1 to entry: The food chain includes the environment of primary production, food and feed production, and handling.

Note 2 to entry: The food chain also includes the packaging materials intended to come into contact with food, *feed* (3.3) or raw materials.

[SOURCE: ISO 22000:2018, 3.20, modified — Notes to entry replaced.]
