Contents

Foreword vii
Acknowledgments ix
Introduction 1
Historical Background for Standard 15 1
Building, System, and Refrigerant Classifications 5
Occupancies 5
Refrigeration System Classification 6
High-Probability Refrigeration System 7
Low-Probability Refrigeration System 7
Changing Refrigerant 8
Refrigerants 8
Numerical Designation of Refrigerants 8
Refrigerant Blends 8
Safety Classification of Refrigerants 11
Restrictions on Refrigerant Use 13
Refrigerant Quantity Limits 13
Occupied Volume Calculations 14
Location of Refrigeration Equipment in a Machinery Room or Outdoors 17
Additional Restrictions 17
Installation Restrictions 19
General Installation Restrictions 19
General Requirements for Machinery Rooms 22
Refrigerant Detection in Machinery Rooms, General Requirements 23
Open Flames in Machinery Rooms 26
Refrigerating Machinery Room Ventilation 26
Machinery Room Ventilation—Vent Locations 29
Machinery Room—Special Requirements 31
Manual Emergency Discharge of Ammonia Refrigerant 32

Design and Construction of Equipment and Systems 33
Materials 33
System Design Pressure 34
Refrigerant-Containing Pressure Vessels 35
Pressure-Relief Protection 37
Pressure Vessel Protection 40
Discharge Capacity 41
Rated Discharge Capacity 44
Refrigerant Discharge to the Atmosphere 45
Positive Displacement Compressor Protection 47
Pressure Limiting Devices 47
Refrigerant Piping, Valves, Fittings, and Related Parts 47
Components Other Than Pressure Vessels and Piping 48
Service Provisions 48
Fabrication 49
Factory Tests 49
Operation and Testing 51
Testing Procedure 51
Declaration 52
General Requirements 53
Signs and Identification 53
Refrigerant Charging, Withdrawal, and Storage 53
Maintenance 54
Responsibility for Operation and Emergency Shutdown 54
Precedence with Conflicting Requirements 55
Listed Equipment 57
References 59
Standard 15 Appendix A: Calculations of the Maximum Allowable Concentration (C_m) of a Blend 61
Standard 15 Appendix C: Worst-Case Composition of Fractionation 63
Standard 15 Appendix H: Allowable Equivalent Length of Discharge Piping (Normative) 65
Design of Relief-Valve Outlet Manifolds 66
Sample Calculations for Adjusting System Flow Due to Pressure Drop in the Inlet Piping 69
Definitions 73
Maximum Equivalent Length for Discharge Pipe Prior to October 2000 79
Concluding Remarks and Recommendations Concerning Discharge Piping for Relief Devices 80
References 80
