This material may not be reproduced or copied, in whole or part, in any printed, mechanical, electronic, film, or other distribution and storage media, without the written consent of ACI.

The technical committees responsible for ACI committee reports and standards strive to avoid ambiguities, omissions, and errors in these documents. Despite these efforts, the users of ACI documents occasionally find information or requirements that may be subject to more than one interpretation or may be incomplete or incorrect. Users who have suggestions for the improvement of ACI documents are requested to contact ACI via the errata website at http://concrete.org/Publications/DocumentErrata.aspx. Proper use of this document includes periodically checking for errata for the most up-to-date revisions.

The technical committees responsible for PCI committee reports and standards strive to avoid ambiguities, omissions, and errors in these documents. Despite these efforts, the users of PCI documents occasionally find information or requirements that may be subject to more than one interpretation or may be incomplete or incorrect. Users who have suggestions for the improvement of PCI documents are requested to contact PCI.

ACI committee documents are intended for the use of individuals who are competent to evaluate the significance and limitations of its content and recommendations and who will accept responsibility for the application of the material it contains. Individuals who use this publication in any way assume all risk and accept total responsibility for the application and use of this information.

PCI committee documents are intended for the use of individuals who are competent to evaluate the significance and limitations of their content and recommendations and who will accept responsibility for the application of the material they contain. Individuals who use this publication in any way assume all risk and accept total responsibility for the application and use of this information.

All information in this publication is provided “as is” without warranty of any kind, either express or implied, including but not limited to, the implied warranties of merchantability, fitness for a particular purpose or non-infringement.

ACI, PCI, and its members disclaim liability for damages of any kind, including any special, indirect, incidental, or consequential damages, including without limitation, lost revenues or lost profits, which may result from the use of this publication.

It is the responsibility of the user of this document to establish health and safety practices appropriate to the specific circumstances involved with its use. ACI nor PCI do not make any representations regarding health and safety issues and the use of this document. The user must determine the applicability of all regulatory limitations before applying the document and must comply with all applicable laws and regulations, including but not limited to, United States Occupational Safety and Health Administration (OSHA) health and safety standards.

Participation by governmental representatives in the work of the American Concrete Institute and in the development of Institute standards does not constitute governmental endorsement of ACI or the standards that it develops.

ACI documents are written via a consensus-based process. The characteristics of ACI technical committee operations include:
(a) Open committee membership
(b) Balance/lack of dominance
(c) Coordination and harmonization of information
(d) Transparency of committee activities to public
(e) Consideration of views and objections
(f) Resolution through consensus process

The technical committee documents of the American Concrete Institute represent the consensus of the committee and ACI. Technical committee members are individuals who volunteer their services to ACI and specific technical committees.

INTRODUCTION, p. 6

CHAPTER 1—GENERAL, p. 7
1.1—Scope of ACI/PCI CODE-319....7
1.2—General....7
1.3—Purpose....8
1.4—Applicability....8
1.5—Interpretation....9
1.6—Building official....10
1.7—Licensed design professional....11
1.8—Construction documents and design records....11
1.9—Testing and inspection....12
1.10—Approval of special systems of design, construction, or alternative construction materials....12

CHAPTER 2—NOTATION AND TERMINOLOGY, p. 13
2.1—Scope....13
2.2—Notation....13
2.3—Terminology....22

CHAPTER 3—REFERENCED STANDARDS, p. 34
3.1—Scope....34
3.2—Referenced standards....34

CHAPTER 4—STRUCTURAL SYSTEM REQUIREMENTS, p. 37
4.1—Scope....37
4.2—Materials....37
4.3—Design loads....37
4.4—Structural system and load paths....37
4.5—Structural analysis....43
4.6—Strength....43
4.7—Serviceability....44
4.8—Durability....44
4.9—Sustainability and resilience....45
4.10—Structural integrity....45
4.11—Fire resistance....45
4.12—Requirements for specific types of construction....45
4.13—Construction and inspection....47
4.14—Strength evaluation of existing structures....47

CHAPTER 5—LOADS, p. 48
5.1—Scope....48
5.2—General—See ACI CODE-318....48
5.3—Load factors and combinations—See ACI CODE-318....48

CHAPTER 6—STRUCTURAL ANALYSIS, p. 49
6.1—Scope....49
6.2—General....49
6.3—Modeling assumptions....49
6.4—Arrangement of live load—See ACI CODE-318....50
6.5—Simplified method of analysis for nonprestressed continuous beams and one-way slabs—See ACI CODE-318....50
6.6—Linear elastic first-order analysis—See ACI CODE-318....50
6.7—Linear elastic second-order analysis—See ACI CODE-318....50
6.8—Inelastic analysis—See ACI CODE-318....50
6.9—Acceptability of finite element analysis—See ACI CODE-318....50

CHAPTER 7—ONE-WAY SLABS, p. 51
7.1—Scope....51
7.2—General....51
7.3—Design limits....51
7.4—Required strength....53
7.5—Design strength....53
7.6—Reinforcement limits....54
7.7—Reinforcement detailing....55

CHAPTER 8—TWO-WAY SLABS, p. 58
8.1—Scope....58

CHAPTER 9—BEAMS, p. 59
9.1—Scope....59
9.2—General....59
9.3—Design limits....60
9.4—Required strength....62
9.5—Design strength....64
9.6—Reinforcement limits....73
9.7—Reinforcement detailing....76
9.8—Nonprestressed one-way joist systems—See ACI CODE-318....84
9.9—Deep beams....84

CHAPTER 10—COLUMNS, p. 88
10.1—Scope....88
10.2—General....88
10.3—Design limits....88
10.4—Required strength....89
10.5—Design strength....90

American Concrete Institute Copyrighted Material—www.concrete.org

PREFACE TO ACI/PCI CODE-319-25

The "Structural Precast Concrete—Code Requirements and Commentary" ("Code") provides minimum requirements for the materials, design, and detailing of structural precast concrete buildings and, where applicable, nonbuilding structures. This Code was developed using a consensus process and addresses plant-produced and site-produced structural precast concrete that contains nonprestressed reinforcement or pretensioned reinforcement, or both. The Design Standard Committee of Precast/Prestressed Concrete Institute was instrumental in the development of code provisions and commentary for this Code and whose efforts are gratefully acknowledged. Among the subjects covered are: design and construction for strength, serviceability, and durability; load combinations, load factors, and strength reduction factors; structural analysis methods; deflection limits; mechanical and adhesive anchoring to concrete; development and splicing of reinforcement; construction document information; field inspection and testing; and methods to evaluate the strength of existing structures.

This Code adheres to the chapter and section numbering of ACI CODE-318-25 and either cites or repeats applicable provisions from ACI CODE-318. Provisions that are identical to ACI CODE-318 and are repeated in this Code are denoted with an equal sign ("="). Provisions that are applicable to precast concrete but are not repeated in the Code are denoted as "See ACI CODE-318." Design and detailing requirements for structural systems or for individual members are presented in chapters devoted to those individual subjects, and the chapters are arranged in a manner that generally follows the process and chronology of design and construction. Information and procedures that are common to the design of multiple member types are located in utility chapters. Within chapters, the terms "out of scope" and "not applicable" are used for numbered section headings from ACI CODE-318 that are not covered by this Code, while the term "intentionally left blank" is used as a place holder to maintain consistency with section numbering in situations where ACI CODE-318 includes a numbered provision that is not also in this Code.

Uses of the Code include adoption by reference in a general building code, and it is in a format that allows such reference without change to its language. Therefore, background details or suggestions for carrying out the requirements or intent of the Code provisions cannot be included within the Code itself. The Commentary is provided for this purpose.

Some considerations of the committee in developing the Code are discussed in the Commentary, with emphasis given to the explanation of provisions. Given the similarity in design requirements for structural concrete that is either cast-in-place or precast, the commentary explains the difference in application. The commentary also provides explanations regarding situations where use of both ACI CODE-318 and this Code is necessary. For instance, design of cast-in-place, nonprestressed concrete members or structures requires the use of ACI CODE-318 alone. Design of precast concrete structures requires the use of this Code and ACI CODE-318. Design of precast, post-tensioned concrete structures requires the use of applicable provisions of ACI CODE-318, ACI/PCI CODE-319, and ACI/PTI CODE-320. For provisions that specifically address post-tensioning and are generally not within the scope of precast concrete, this code references either ACI CODE-318 or ACI/PTI CODE-320, as applicable.

Much of the research data referenced in preparing the Code is cited for the user desiring to study individual questions in greater detail. Other documents that provide suggestions for carrying out the requirements of the Code are also cited, including PCI Standards and PCI or Tilt-up Concrete Association (TCA) design manuals, recommended practices, and reports.

KEYWORDS

INTRODUCTION

ACI/PCI CODE-319-25, "Structural Precast Concrete—Code Requirements and Commentary," hereinafter called the Code or the 2025 Code, and its "Commentary," are presented in a side-by-side column format. These are two separate but coordinated documents, with Code text placed in the left column and the corresponding Commentary text aligned in the right column. Commentary section numbers are preceded by an "R" to further distinguish them from Code section numbers. The two documents are bound together solely for the user's convenience. Each document carries a separate enforceable and distinct copyright.

As the name implies, "Structural Precast Concrete—Code Requirements and Commentary" is meant to be used as part of a legally adopted building code and as such must differ in form and substance from documents that provide detailed specifications, recommended practice, complete design procedures, or design aids.

The Code is intended to cover all buildings of the usual types, both large and small. Requirements more stringent than the Code provisions may be desirable for unusual construction. The Code and Commentary cannot replace sound engineering knowledge, experience, and judgment.

A building code states only the minimum requirements necessary to provide for public health and safety. The Code is based on this principle. For any structure, the owner or the licensed design professional may require the quality of materials and construction to be higher than the minimum requirements necessary to protect the public as stated in the Code. However, lower standards are not permitted.

The Code has no legal status unless it is adopted by the government bodies having the police power to regulate building design and construction. Where the Code has not been adopted, it may serve as a reference to good practice even though it has no legal status.

The Code and Commentary are not intended for use in settling disputes between the owner, licensed design professional, specialty engineer, architect, contractor, or their agents, subcontractors, material suppliers, or testing agencies. Therefore, the Code cannot define the contract responsibility of each of the parties in precast concrete construction. In structural precast concrete, either all or a portion of the design work is often delegated to the contractor who retains a specialty engineer to perform such design work. The division of responsibility between the engineer-of-record and the specialty engineer must be clearly defined in the contract documents. ACI PRC-132-14 provides guidance to the engineer of record regarding the details needed to address delegated design in the contract documents. General references requiring compliance with the Code in the project specifications should be avoided because the contractor is rarely in a position to accept responsibility for design details or construction requirements that depend on a detailed knowledge of the design. Design-build construction contractors, however, typically combine the design and construction responsibility. In structural precast concrete, either all or a portion of the design work is often delegated to the contractor who retains a specialty engineer to perform such design work. Generally, the contract documents should contain all the necessary requirements to ensure compliance with the Code. In part, this can be accomplished by reference to specific Code sections in the project specifications. Other ACI publications, such as "Specifications for Structural Concrete" (ACI SPEC-301) are written specifically for use as contract documents for construction.

The Commentary discusses some of the considerations of Committee 319 in citing ACI CODE-318 provisions or in developing new provisions contained in the Code. Emphasis is given to the explanation of provisions that may be unfamiliar to Code users. Comments on specific provisions are made under the corresponding chapter and section numbers of the Code.

The Commentary is not intended to provide a complete historical background concerning the development of the Code, nor is it intended to provide a detailed résumé of the studies and research data reviewed by the committee in formulating the provisions of the Code. However, references to some of the research data are provided for those who wish to study the background material in depth.

The Commentary directs attention to other documents that provide suggestions for carrying out the requirements and intent of the Code. However, those documents and the Commentary are not a part of the Code.

The Commentary is intended for the use of individuals who are competent to evaluate the significance and limitations of its content and recommendations, and who will accept responsibility for the application of the information it contains. ACI and PCI disclaim any and all responsibility for the stated principles. ACI and PCI shall not be liable for any loss or damage arising therefrom. Reference to the Commentary shall not be made in construction documents. If items found in the Commentary are desired by the licensed design professional to be a part of the contract documents, they shall be restated in mandatory language for incorporation by the licensed design professional.

It is recommended to have the materials, processes, quality control measures, and inspections described in this document tested, monitored, or performed by individuals holding the appropriate ACI and PCI Certification or equivalent, when available. The personnel certification programs of the American Concrete Institute and the Precast/Prestressed Concrete Institute; the plant certification programs of the Precast/Prestressed Concrete Institute, and the Concrete Reinforcing Steel Institute's Voluntary Certification Program for Fusion-Bonded Epoxy Coating Applicator Plants are available for this purpose. In addition, "Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection" (ASTM E329-21) specifies performance requirements for inspection and testing agencies.

American Concrete Institute Copyrighted Material—www.concrete.org

CODE

CHAPTER 1—GENERAL

1.1—Scope of ACI/PCI CODE-319

=**1.1.1** This chapter addresses
(a) General requirements of this Code
(b) Purpose of this Code
(c) Applicability of this Code
(d) Interpretation of this Code
(e) Definition and role of the building official and the licensed design professional
(f) Construction documents
(g) Testing and inspection
(h) Approval of special systems of design, construction, or alternative construction materials

1.2—General

1.2.1 ACI/PCI CODE-319, "Building Code Requirements for Structural Precast Concrete," is hereafter referred to as "this Code."

=**1.2.2** In this Code, the general building code refers to the building code adopted in a jurisdiction. When adopted, this Code forms part of the general building code.

1.2.3 The official version of this Code is the English language version, using inch-pound units, published by the American Concrete Institute and the Precast/Prestressed Concrete Institute.

COMMENTARY

CHAPTER R1—GENERAL

R1.1—Scope of ACI/PCI CODE-319

R1.1.1 The Code includes provisions for the design of precast concrete used for structural purposes, including plain concrete; concrete containing nonprestressed reinforcement, pretensioned reinforcement, or both; and anchoring to concrete. Precast concrete includes plant-produced or site-produced structural precast concrete such as tilt-up construction.

Although fabrication of precast concrete has different procedures than cast-in-place structural concrete, precast concrete structures are designed using many of the same requirements that are included in ACI CODE-318. Because the Code and ACI CODE-318 share many common requirements, the Code was formatted with section numbering that is parallel to that of ACI CODE-318.

For ease of use, provisions for cast-in-place concrete that apply to precast concrete and are identical to ACI CODE-318 are denoted with an equal sign ("="). Provisions that are applicable to precast concrete but are not reproduced in the Code are denoted as "See ACI CODE-318".

Where requirements specific to precast concrete were added to the Code, new sections were created to avoid conflict with ACI CODE-318.

The terms "out of scope" and "not applicable" are used for numbered section headings from ACI CODE-318 that are not covered by the Code, while the term "intentionally left blank" is used as a place holder to maintain consistency with section numbering in situations where ACI CODE-318 includes a numbered provision that is not also in the Code.

Design of precast, post-tensioned concrete structures requires the use of applicable provisions of ACI/PCI CODE-319, ACI/PTI CODE-320, and ACI CODE-318. For provisions that specifically address post-tensioning and are generally not within the scope of precast concrete, the Code references either ACI CODE-318 or ACI/PTI CODE-320, as applicable.

This chapter includes numerous provisions that explain where the Code applies and how it is to be interpreted.

R1.2—General

R1.2.1 The commentary refers to ACI/PCI CODE-319 as "the Code."

R1.2.2 The American Concrete Institute and the Precast/Prestressed Concrete Institute recommend that the Code be adopted in its entirety.

R1.2.3 ACI-PCI Committee 319 develops the Code in English, using inch-pound units. Two translations are published by ACI:

(a) In English using SI units (ACI/PCI CODE-319-25, "Structural Precast Concrete—Code Requirements and Commentary (SI)").
