CONTENTS

FOREWORD 5
1 Scope 7
2 Normative references 7
3 Terms and definitions 8
4 Electrical characteristics – Coupler logic and timing definitions 19
5 Coupler for protection against electrical shock 20
5.1 General 20
5.2 Type 20
5.3 Ratings 20
5.3.1 General 20
5.3.2 Safety limiting values 20
5.3.3 Functional ratings 20
5.3.4 Rated isolation voltages 20
5.4 Electrical safety requirements 20
5.5 Electrical, environmental and/or endurance test information 21
5.5.1 General 21
5.5.2 Routine test 23
5.5.3 Sample test 23
5.5.4 Maximum surge isolation voltage 23
5.5.5 Type test 24
6 Measuring methods for couplers 35
6.1 General 35
6.2 Isolation capacitance (C_{IO}) 35
6.2.1 Purpose 35
6.2.2 Circuit diagram 35
6.2.3 Measurement procedure 36
6.2.4 Precautions to be observed 36
6.2.5 Special conditions 36
6.3 Isolation resistance between input and output, R_{IO} 36
6.3.1 Purpose 36
6.3.2 Circuit diagram 36
6.3.3 Precautions to be observed 37
6.3.4 Measurement procedure 37
6.3.5 Special conditions 37
6.4 Isolation test 37
6.4.1 Purpose 37
6.4.2 Circuit diagram 37
6.4.3 Test procedure 38
6.4.4 Requirements 38
6.5 Partial discharges of coupler 39
6.5.1 Purpose 39
6.5.2 Circuit diagram 39
6.5.3 Description of Figure 9 test circuit and requirements 39
6.5.4 Test procedure 40
6.5.5 Description of calibration circuit (see Figure 10) 40

6.5.6 Test methods 41
6.5.7 Specified conditions 41
6.5.8 Test voltage conditions 42
6.6 Switching times of couplers 42
6.6.1 Purpose 42
6.6.2 Circuit diagram 42
6.6.3 Measurement procedure 43
6.6.4 Specified conditions 44
6.7 Measuring methods of common-mode transient immunity (CMTI) for magnetic and capacitive couplers 44
6.7.1 Purpose 44
6.7.2 Circuit diagram 44
6.7.3 Precautions to be observed 45
6.7.4 Static CMTI measuring procedure 46
6.7.5 Specified conditions 47
6.7.6 Dynamic CMTI measuring procedure 47
Annex A (informative) Qualification guidance 48
Bibliography 51

SEMICONDUCTOR DEVICES –

Part 17: Magnetic and capacitive coupler for basic and reinforced insulation

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60747-17 has been prepared by subcommittee SC 47E: Discrete semiconductor devices, of IEC technical committee TC 47: Semiconductor devices.

This first edition cancels and replaces IEC PAS 60747-17:2011. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to IEC PAS 60747-17:2011:

a) introduced lifetime safety factors for improved life time consideration, to comply with widely recognized aging mechanisms of silicone dioxide (TDDB) and thin film polymer isolation layers;
b) significantly improved "end of life testing" paragraph and statistical life time consideration by adding detailed description on process, safety factors, methods of generating data points and respective lifetime interpolations as well as being specific on minimum amount of samples required;

c) introduced concept of certification by similarity, including Annex A, giving guidance on qualification considerations and required certification process;

d) alternative pulse shape allowed for surge pulse testing, to avoid issues due to surge tester availability;

e) various improvements throughout the standard: definitions, for example type of coupler have been improved, introduction of surge impulse V_{IMP} rating, usage of glass transition temperature, pre-conditioning have been redefined for improved usability and better compatibility with today's design and functionality of couplers, available mold compounds, etc.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
47E/711/FDIS	47E/715/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 60747 series, published under the general title *Semiconductor devices*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

SEMICONDUCTOR DEVICES –

Part 17: Magnetic and capacitive coupler for basic and reinforced insulation

1 Scope

This part of IEC 60747 specifies the terminology, essential ratings, characteristics, safety test and the measuring methods of magnetic coupler and capacitive coupler.

It specifies the principles and requirements of insulation and isolation characteristics for magnetic and capacitive couplers for basic insulation and reinforced insulation.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
