IEC 61196-1-114

Edition 2.0 2025-11

INTERNATIONAL STANDARD

Coaxial communication cables -
Part 1-114: Electrical test methods - Test for inductance

ICS 33.120.10

ISBN 978-2-8327-0853-8

IEC 61196-1-114:2025-11(en)

CONTENTS

FOREWORD 2
1 Scope 4
2 Normative references 4
3 Terms, definitions and abbreviated terms 4
3.1 Terms and definitions relative permittivity 4
3.2 Abbreviated terms 5
4 Procedure 5
4.1 Equipment 5
4.2 Test sample 5
4.3 Calibration 5
4.4 Test setup 5
4.5 Measuring procedure 5
5 Expression and results 6
6 Test report 6
Annex A (informative) The bending effect on coaxial cable inductance 7
A.1 Background 7
A.2 Principle 7
A.2.1 Circuit model for impedance of cables with the bi-conductor structure at low frequencies 7
A.2.2 Line current model for the approximation of partial inductance 8
A.2.3 Deviation of the inductances between bent and straightened cables 8
A.3 Comparison between theoretical derivation and practical tests 13
Bibliography 15

Figure A.1 – Circuit model for inductance measurement configuration at low frequencies 7
Figure A.2 – Line current model for a straightened twinaxial cable 9
Figure A.3 – Line current model for a bent twinaxial cable 10
Figure A.4 – The relationships between l, θ_{m} and L_{Δ} for a twinaxial cable 11
Figure A.5 – Line current model for the coaxial cable 12
Figure A.6 – The relationships between l, θ_{m} and L_{Δ} for a coaxial cable 13

Table A.1 – Inductance of the CUT at different bending angles 14

INTERNATIONAL ELECTROTECHNICAL COMMISSION

_____

Coaxial communication cables - Part 1-114: Electrical test methods - Test for inductance

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at https://patents.iec.ch. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 61196-1-114 has been prepared by subcommittee 46A: Coaxial cables, of IEC technical committee 46: Cables, wires, waveguides, RF connectors, RF and microwave passive components and accessories. It is an International Standard.

This second edition cancels and replaces the first edition published in 2015. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

a) the term "inductance" has been revised;
b) the necessary abbreviated term is added;
c) the length and layout of the test sample have been revised;

d) the measuring procedure has been revised;

e) the additional information for the bending effect on coaxial cable inductance test is provided in Annex A.

The text of this International Standard is based on the following documents:

Draft	Report on voting
46A/1735/FDIS	46A/1737/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 61290 series, published under the general title *Coaxial communication cables*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

– reconfirmed,

– withdrawn, or

– revised.

1 Scope

This part of IEC 61196 specifies a test method to determine the inductance characteristics of coaxial communication cables.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 61196-1, *Coaxial communication cables - Part 1: Generic specification - General, definitions and requirements*

IEC 61196-1-101, *Coaxial communication cables - Part 1-101: Electrical test methods - Test for conductor DC resistance of cable*
