IEC 62541-13

Edition 3.0 2025-12

INTERNATIONAL STANDARD

REDLINE VERSION

OPC unified architecture -
Part 13: Aggregates

ICS 25.040.40; 35.100.05

ISBN 978-2-8327-0963-4

CONTENTS

FOREWORD....3
1 Scope....6
2 Normative references....6
3 Terms, definitions and abbreviated terms....6
3.1 Terms and definitions....6
3.2 Abbreviated terms....9
4 Aggregate information model....10
4.1 General....10
4.2 Aggregate Objects....10
4.2.1 General....10
4.2.2 AggregateFunction Object....11
4.3 MonitoredItem AggregateFilter....13
4.3.1 MonitoredItem AggregateFilter Defaults....13
4.3.2 MonitoredItem Aggregates and Bounding Values....13
4.4 Exposing Supported Functions and Capabilities....14
5 Aggregate specific usage of Services....15
5.1 General....15
5.2 Aggregate data handling....15
5.2.1 Overview....15
5.2.2 ReadProcessedDetails structure overview....15
5.2.3 AggregateFilter structure overview....15
5.3 Aggregates StatusCodes....16
5.3.1 Overview....16
5.3.2 Operation level result codes....16
5.3.3 Aggregate Information Bits....17
5.4 Aggregate details....18
5.4.1 General....18
5.4.2 Common characteristics....18
5.4.3 Specific aggregated data handling....21
Annex A (informative) Aggregate ~~Specific~~ examples ~~— Historical Access~~....64

Figure 1 – Representation of Aggregate Configuration information in the AddressSpace....14
Figure 2 – Variable with Stepped = False and Simple Bounding Values....23
Figure 3 – Variable with Stepped = True and Interpolated Bounding Values....24

INTERNATIONAL ELECTROTECHNICAL COMMISSION

_____

OPC unified architecture - Part 13: Aggregates

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at https://patents.iec.ch. IEC shall not be held responsible for identifying any or all such patent rights.

This redline version of the official IEC Standard allows the user to identify the changes made to the previous edition IEC 62541-13:2020. A vertical bar appears in the margin wherever a change has been made. Additions are in green text, deletions are in strikethrough red text.

IEC 62541-13 has been prepared by subcommittee 65E: Devices and integration in enterprise systems, of IEC technical committee 65: Industrial-process measurement, control and automation. It is an International Standard.

This third edition cancels and replaces the second edition published in 2020. This edition constitutes a technical revision.

This edition includes the following technical changes with respect to the previous edition:

a) Multiple fixes for the computation of aggregates
   - The Raw status bit is always set for non-bad StatusCodes for the Start and End aggregates.
   - Entries in the Interpolative examples Tables A2.2 Historian1, Historian2, and Historian3 have been changed from Good to Good, Raw status codes when the timestamp matches with the timestamp of the data source.
   - Missing tables have been added for DurationInStateZero and DurationInStateNonZero.
   - The value of zero has been removed for results with a StatusCode of bad.
   - Data Type was listed as "Status Code" when it is "Double" for both Standard Deviation and both Variance Aggregates.
   - Rounding Error in TimeAverage and TimeAverage2 have been corrected.
   - The status codes have been corrected for the last two intervals and the value has been corrected in the last interval.
   - The wording has been changed to be more consistent with the certification testing tool.
   - UsedSlopedExtrapolation set to true for Historian2 and all examples locations needed new values or status' are modified.
   - Values affected by percent good and percent bad have been updated.
   - PercentGood/PercentBad are now accounted for in the calculation.
   - TimeAverage uses SlopedInterpolation but the Time aggregate is incorrectly allowed to used Stepped Interpolation.
   - Partial bit is now correctly calculated.
   - Unclear sentence was removed.
   - Examples have been moved to a CSV.
   - The value and status code for Historian 3 have been updated.
   - TimeAverage2 Historian1 now takes uncertain regions into account when calculating StatusCodes.
   - TimeAverage2 Historian2 now takes uncertain regions into account when calculating StatusCodes.
   - Total2 Historian1 now takes uncertain regions into account when calculating StatusCodes
   - Total2 Historian2 now takes uncertain regions into account when calculating StatusCodes
   - Maximum2 Historian1 now takes uncertain regions into account when calculating StatusCodes
   - MaximumActualTime2 Historian1 now takes uncertain regions into account when calculating StatusCodes
   - Minimum2 Historian1 now takes uncertain regions into account when calculating StatusCodes
   - MinimumActualTime2 Historian1 now has the StatusCodes calculated while using the TreatUncertainAsBad flag.

- Range2 Historian1 now looks at TreatUncertainAsBad in the calculation of the StatusCodes.
- Clarifications have been made to the text defining how PercentGood/PercentBad are used. The table values and StatusCodes of the TimeAverage2 and Total2 aggregates have been corrected.

The text of this International Standard is based on the following documents:

Draft	Report on voting
65E/1059/CDV	65E/1098/RVC

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

Throughout this document and the other parts of the IEC 62541 series, certain document conventions are used:

Italics are used to denote a defined term or definition that appears in the "Terms and definitions" clause in one of the parts of the IEC 62541 series.

Italics are also used to denote the name of a service input or output parameter or the name of a structure or element of a structure that are usually defined in tables.

The *italicized terms and names* are, with a few exceptions, written in camel-case (the practice of writing compound words or phrases in which the elements are joined without spaces, with each element's initial letter capitalized within the compound). For example, the defined term is *AddressSpace* instead of Address Space. This makes it easier to understand that there is a single definition for *AddressSpace*, not separate definitions for Address and Space.

A list of all parts in the IEC 62541 series, published under the general title *OPC Unified Architecture*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

– reconfirmed,
– withdrawn, or
– revised.

1 Scope

This part of IEC 62541 is part of the overall OPC Unified Architecture specification series and defines the information model associated with Aggregates.

Programmatically produced aggregate examples are listed in Annex A.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments and errata) applies.
