CONTENTS

FOREWORD 5
1 Scope 7
2 Normative references 7
3 Terms, definitions and symbols 7
3.1 Terms and definitions 7
3.2 Symbols 8
4 Testing requirements 9
5 Instrumentation 9
5.1 Solar radiation measurement 9
5.2 Flow rate measurement 9
5.3 Temperature measurements 9
5.4 Wind speed measurement 10
5.5 Data acquisition 10
5.6 Tracking accuracy measurement 10
6 Test procedure 10
6.1 General 10
6.2 Collector description 10
6.3 Test equipment 10
6.3.1 Performance test 10
6.3.2 Optical characterization for performance testing 11
6.3.3 Tracking error test 12
6.4 Measurement procedure 12
6.4.1 General 12
6.4.2 Cleanliness 12
6.4.3 Test conditions 13
6.5 Calculation and test results evaluation 13
6.5.1 General 13
6.5.2 Useful power 14
6.5.3 Incidence angle modifier (IAM) 15
6.5.4 Evaluation for the quasi-dynamic test method QDT 17
6.5.5 Evaluation for the dynamic test method DT 18
6.5.6 Validation performance test 19
6.5.7 Tracking error test (optional) 20
6.5.8 Uncertainty estimation 21
7 Reporting format 21
Annex A (informative) Linear Fresnel collector description 22
A.1 General description 22
A.1.1 Overview 22
A.1.2 Collector row structure 23
A.1.3 Support structure and foundation 24
A.1.4 Primary reflectors 24
A.1.5 Mirror support 24
A.1.6 Mirror drives 25
A.1.7 Receiver 25
A.1.8 Receiver tube 25
A.1.9 Receiver cavity 26

A.1.10 Receiver support and casing 27
A.1.11 Tracking system 27
A.2 Operation modes 28
Annex B (normative) Documentation to be supplied by the collector manufacturer 29
B.1 General configuration of the linear Fresnel collector 29
B.1.1 Model and manufacturer 29
B.1.2 Axes and movements 29
B.1.3 Collector grouping 29
B.2 Geometric characterization of the linear Fresnel collector 29
B.3 Mechanical characterization of the linear Fresnel collector 29
B.4 Optical characterization of the linear Fresnel collector 30
B.5 Description of linear Fresnel collector operating modes 30
B.5.1 Design operating conditions 30
B.5.2 Normal operating conditions 30
B.5.3 Reduced weather/geological operating conditions (features to be reduced shall be defined (optical, thermal performance) and how much they are reduced) 30
B.5.4 Stow conditions 30
B.5.5 Survival conditions 30
B.6 Optical and tracking accuracy 30
B.6.1 Accuracy under normal operating conditions 30
B.6.2 Accuracy under reduced operating conditions 30
B.7 Linear Fresnel collector component information 30
B.7.1 Linear Fresnel collector structure 30
B.7.2 Receiver tube 31
B.7.3 Receiver cavity 31
B.7.4 Primary and secondary reflectors 31
B.7.5 Drive mechanism 31
Annex C (normative) Testing report 32
C.1 General 32
C.2 Collector characteristics 32
C.3 Linear Fresnel collector limitations 33
C.4 Description of the experimental setup 33
C.5 Results 33
Annex D (informative) Deflectometry mirror testing 35
D.1 Mirror shape quality 35
Annex E (informative) Tracking error testing 36

SOLAR THERMAL ELECTRIC PLANTS –

Part 5-2: Systems and components – General requirements and test methods for large-size linear Fresnel collectors

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62862-5-2 has been prepared by IEC technical committee 117: Solar thermal electric plants. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
117/148/CDV	117/160/RVC

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all parts in the IEC 62862 series, published under the general title *Solar thermal electric plants*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

SOLAR THERMAL ELECTRIC PLANTS –

Part 5-2: Systems and components – General requirements and test methods for large-size linear Fresnel collectors

1 Scope

This part of IEC 62862 specifies the requirements and the test methods for the characterization of a large-size linear Fresnel collector.

This document covers the determination of optical and thermal performance of linear Fresnel collectors, and the tracking accuracy of the collector one-axis tracking system. This test method is for outdoor testing only.

This document applies to linear Fresnel collectors according to Annex A equipped with the manufacturer-supplied sun tracking mechanism.

The testing method in this document does not apply to any collector under operating conditions where phase-change of the fluid occurs. Although the principles of this document can be applied also to collectors with phases-change, however, the sensors (enthalpy, flow, temperatures) required for that are not described in this document.

This document applies to the whole collector field in-situ or as a minimum unit to be tested to an individual collector string (loop) connected to the main piping (flow, return flow) to and from a heat sink, covering the full temperature range of the field.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
