CONTENTS

FOREWORD 5
1 Scope 7
2 Normative references 7
3 Terms, definitions and abbreviated terms 7
3.1 Terms and definitions 7
3.2 Abbreviated terms 8
4 Standard measuring conditions 8
4.1 General 8
4.2 Standard measuring environmental conditions 9
4.3 Standard dark room conditions 9
4.4 Standard conditions of measuring equipment 9
4.5 Conditions of measuring equipment 10
4.5.1 General conditions 10
4.5.2 Measurement coordinate system 13
4.5.3 Diffuse reflectance standard 13
4.5.4 Illuminance meter 14
4.5.5 Colorimeter 14
4.5.6 Signal source of test patterns 14
4.5.7 Integrating sphere 14
4.5.8 Spectral radiance/irradiance meters 15
5 Adjustment of the laser projector 15
5.1 Projector and image plane placement 15
5.2 Focusing of the projector 15
5.3 Standard projector setup conditions 16
5.4 Standard image measurement locations 16
5.5 Colour tile patterns 17
5.6 RGBCMY colour pattern 18
5.7 Measuring the projected image area 19
5.8 Maintaining the normal working conditions 20
6 Measuring methods 20
6.1 Light output 20
6.2 Spectroradiometric measurements 20
6.2.1 General 20
6.2.2 Measuring equipment 20
6.2.3 Measuring method 20
6.2.4 Data analysis 21
6.3 Illuminance uniformity 21
6.3.1 General 21
6.3.2 Measuring equipment 21
6.3.3 Measuring method 22
6.4 Contrast ratio 22
6.4.1 General 22
6.4.2 Measuring equipment 22
6.4.3 Measuring method 22
6.5 Chromaticity coordinates 23
6.5.1 General 23

6.5.2 Measuring equipment 23
6.5.3 Measuring method 23
6.5.4 Data analysis 24
6.6 White point chromaticity coordinates and correlated colour temperature 24
6.6.1 General 24
6.6.2 Measuring equipment 24
6.6.3 Measuring method 25
6.6.4 Data calculation 25
6.7 Greyscale illuminance and chromaticity coordinates 25
6.7.1 General 25
6.7.2 Measuring equipment 25
6.7.3 Measuring method 25
6.8 Colour uniformity 26
6.8.1 General 26
6.8.2 Measuring equipment 26
6.8.3 Measuring method 26
6.8.4 Data analysis 27
6.9 Colour gamut 27
6.9.1 General 27
6.9.2 Chromaticity gamut area 28
6.9.3 CIELAB gamut volume 30
Annex A (normative) RGB boundary colours for CIELAB gamut volume measurements 33
A.1 General 33
A.2 Equally spaced 98 boundary colours on the RGB cube 33
A.3 Recommended 602 boundary colours on the RGB cube 36
Annex B (informative) Calculation method for CIELAB gamut volume 51
B.1 Purpose 51
B.2 Procedure for calculating the colour gamut volume 51
B.3 Number of sampled colours 52
B.4 RGB cube surface subdivision method for CIELAB gamut volume calculation 52
B.4.1 General 52
B.4.2 Assumption 52
B.4.3 Uniform RGB grid algorithm 53
B.4.4 Software example execution 55
Annex C (informative) Calculation method for chromaticity gamut area overlap 63
C.1 Purpose 63
C.2 Chromaticity gamut area overlap 63
Annex D (informative) Light output 64
D.1 White light output (WLO) method 64
D.1.1 Purpose 64
D.1.2 Measuring equipment 64
D.1.3 Measuring method 64
D.1.4 Data calculation 64
D.2 Colour-signal white (CSW) method 65
D.2.1 Purpose 65
D.2.2 Measuring equipment 65
D.2.3 Measuring method 65
D.2.4 Data calculation 66

LASER DISPLAYS –

Part 5-1: Measurement of optical performance for laser front projection

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62906-5-1 has been prepared by IEC technical committee 110: Electronic displays. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
110/1351/FDIS	110/1367/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all parts in the IEC 62906 series, published under the general title *Laser displays*, can be found on the IEC website.

Future documents in this series will carry the new general title as cited above. Titles of existing documents in this series will be updated at the time of the next edition.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

LASER DISPLAYS –

Part 5-1: Measurement of optical performance for laser front projection

1 Scope

This part of IEC 62906 specifies the standard measurement conditions and measurement methods for front projection displays without screen which use lasers or laser hybrids as light sources. The hybrid light sources can use both lasers and spontaneous emission-based light sources. This document covers optical performance measurements for full-frame projection technologies such as digital micro-mirror devices (DMDs), liquid crystal on silicon (LCOS), and liquid crystal display (LCD) projectors. Other displays, such as raster-scanned (flying spot) projection displays, are not included.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content shall constitute requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
