CONTENTS

FOREWORD 3
INTRODUCTION 5
1 Scope 6
2 Normative references 6
3 Terms, definitions and abbreviated terms 6
3.1 Terms and definitions 6
3.2 Abbreviated terms 9
4 System reliability 9
5 Calculation of system reliability 9
5.1 General 9
5.2 Form to present reliability data 10
5.3 Structures and calculations 10
5.3.1 Basic formulas 10
5.3.2 Series structures 11
5.3.3 Parallel structures 12
5.3.4 Mixed structures 13
5.3.5 Summary 14
Annex A (informative) Examples of typical automation systems 15
A.1 General 15
A.2 Example for series structure of process automation system 15
A.3 Example for mixed structure of process automation sub-system 16
Annex B (informative) Methods to improve the system reliability 18
B.1 General 18
B.2 Methods to reduce systematic failure 18
B.2.1 General 18
B.2.2 Measures to avoid systematic failure 18
B.2.3 Measures to control systematic failure 18
B.3 Method of reducing random hardware failure 19
B.3.1 Fault-tolerant design 19
B.3.2 Error avoidance design 19
B.3.3 System derating design 19

INTERNATIONAL ELECTROTECHNICAL COMMISSION

_____

RELIABILITY OF INDUSTRIAL AUTOMATION DEVICES AND SYSTEMS –

Part 2: System reliability

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a technical report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC TR 63164-2 has been prepared by IEC technical committee 65: Industrial-process measurement, control and automation.

The text of this Technical Report is based on the following documents:

Enquiry draft	Report on voting
65/771/DTR	65/796/RVDTR

Full information on the voting for the approval of this technical report can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 63164 series, published under the general title *Reliability of industrial automation devices and systems*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

INTRODUCTION

Under the background of Smart Manufacturing, new production modes such as mass customization based on interconnected factories require real-time interconnection, frequent switching and integration across different levels. Therefore, reliability is an important requirement for automation systems in factories. Reliability data of automation systems is the basis for maintenance planning e.g. stock-keeping of spare parts of a production line. An automation system usually consists of several different devices or machines that are used in series, parallel or mixed. This technical report gives guidance for system integrator on how to evaluate the reliability of such entire systems.

This report is the second part of the series. This part concentrates on calculation of failure rates or reliability values for systems based on failure rates or reliability values of single devices depending on the structure of the system. This is necessary for system integrators or designers to be able to calculate the reliability of an entire system from the reliability values of individual devices (see IEC TS 63164-1).

Parts within IEC 63164 series are:

Part 1: Assurance of automation devices reliability data and specification of their source

Part 2: System reliability

Future parts may include following subjects:

- collecting reliability data for automation devices in the field;
- user guide.

RELIABILITY OF INDUSTRIAL AUTOMATION DEVICES AND SYSTEMS –

Part 2: System reliability

1 Scope

This part of IEC 63164 provides guidance on the calculation of reliability data of automation systems which can be simplified as series, parallel or mixed structure based on reliability data of single devices and/or sub-systems, and on the form to present the data.

NOTE This procedure is only targeted to the reliability of automation systems, but not systems that embed automation systems, e.g. process plant.

Reliability is included in dependability, and this document is mainly focused on random hardware failures that affect reliability. Dependability is used as a collective term for the time-related quality characteristics of an item and additionally includes availability, recoverability, maintainability, maintenance support performance, and, in some cases, other characteristics such as durability, safety and security, which are all not in the scope of this Technical Report.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

There are no normative references in this document.
