About the IEC
The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications
The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform
The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, …). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished
Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc
If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch
Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org
The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

Warning! Make sure that you obtained this publication from an authorized distributor.

CONTENTS

FOREWORD 5
1 Scope 7
2 Normative references 7
3 Terms, definitions, symbols and abbreviated terms 8
3.1 Terms and definitions 8
3.2 Symbols and abbreviated terms 16
3.2.1 Symbols 16
3.2.2 Abbreviated terms 17
4 Overview 18
4.1 General 18
4.2 Measurement methodology overview 19
4.3 Document overview 19
5 System requirements 20
5.1 General 20
5.2 Floating lidar system (without mooring system) 20
5.2.1 Functional requirements 20
5.2.2 Documentary requirements 24
5.3 Mooring system (below the water line) 24
5.3.1 Functional requirements 24
5.3.2 Documentary requirements 25
6 Unit qualification (calibration of FLS wind measurements) 25
6.1 Calibration method overview 25
6.2 Component verification 26
6.2.1 General 26
6.2.2 Lidar onshore calibration 26
6.2.3 Auxiliary systems 26
6.3 Setup of offshore calibration test 26
6.3.1 Site requirements 26
6.3.2 Setup requirements 27
6.4 Full calibration test methodology 28
6.4.1 General 28
6.4.2 Identification of a trusted reference system 28
6.4.3 Data completion criteria 29
6.4.4 Wind speed uncertainty 29
6.5 Simplified calibration protocol 31
6.5.1 General 31
6.5.2 Campaign duration 31
6.5.3 Analysis 31
6.6 System and data availability 32
6.7 Offshore calibration intervals 33
6.8 Reporting requirements 34
7 Type qualification (classification) 35
7.1 General 35
7.2 Treatment of intermediate variables 36
7.3 Long-term tests 36
7.3.1 Data acquisition 36

7.3.2 Data completion criteria 37
7.3.3 List of environmental variables to be considered 37
7.4 Sensitivity study 38
7.5 Evidence base supporting the evaluation of FLS performance 39
7.6 Reporting requirements 39
7.6.1 General 39
7.6.2 Reporting requirements for type qualification tests 40
7.6.3 Reporting requirements for evidence base 40
8 Quantification of final (measurement) uncertainty budget 41
8.2 Calculation of classification uncertainty 42
8.2.1 General 42
8.2.2 Sensitivity uncertainty scenarios 43
8.3 Calculation of calibration uncertainty 46
8.4 Calculation of configuration uncertainty 46
8.4.1 General 46
8.4.2 Drift tolerances 47
8.4.3 In situ data quality assurance 47
8.4.4 Change in buoy configuration 47
8.4.5 Change in buoy stability 47
9 Measurement procedure 47
9.1 General 47
9.2 Pre-deployment checks and requirements 48
9.2.1 Health, safety, and environment 48
9.2.2 Measurement setup 48
9.2.3 Mooring 49
9.3 Installation/deployment and documentation requirements 50
9.3.1 General 50
9.3.2 Checklist 50
9.3.3 Meta data format 51
9.4 Campaign 51
9.4.1 Campaign checks and notifications 51
9.4.2 In situ data quality assurance 52
9.4.3 In the event of a change in buoy configuration 53
9.4.4 Data availability 54
10 Reporting 55
Annex A (normative) The instrument qualification cycle 57
A.1 General 57
A.1.1 Overview 57
A.1.2 Instrument qualification 57
A.1.3 Measurement uncertainty 57
A.1.4 The qualification cycle 58
A.2 Type qualification 59
A.2.1 General 59
A.2.2 Lidar measurement procedure 59
A.2.3 Intermediate value uncertainty due to changes in environmental conditions 60
A.2.4 List of environmental variables to be considered 60
A.2.5 Significance of uncertainty contribution 60
A.2.6 Evidence base supporting the adequacy of the WFR 60

A.2.7 Envelope of operational conditions 61
A.2.8 Uncertainty scenarios 62
A.2.9 Extension of evidence base 62
A.2.10 Test results comprising the evidence base 62
A.3 Unit qualification 63
A.3.1 General 63
A.3.2 Reference instrumentation 63
A.3.3 Measurement procedure 63
A.3.4 Filtering 63
A.4 Reporting requirements 63
A.4.1 Type qualification 63
A.4.2 Unit qualification 64
Annex B (informative) Turbulence intensity (TI) 65
B.1 General 65
B.2 Definition 65
B.3 Estimation of TI based on FLS measurements 66
B.4 Evaluation of FLS based estimates of TI 66
Annex C (informative) Specific measurement campaign (SMC) guidance 68
C.1 Health and safety guidance 68
C.2 Required documentation 69
C.3 Example deployment checklist 72
C.4 Operational documentation 74
C.5 In-situ data quality assurance 75
C.5.1 General 75
C.5.2 Numerical reference example 76
C.5.3 Fixed reference example 77
C.6 T-test – as a means to compare pre and post FLS configuration changes 78
Annex D (informative) Hierarchy of uncertainties 79
D.1 The ACARA principle 79
D.2 Hierarchy of uncertainties 79
Bibliography 81

INTERNATIONAL ELECTROTECHNICAL COMMISSION

_____

WIND ENERGY GENERATION SYSTEMS –

Part 50-4: Use of floating lidar systems for wind measurements

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at https://patents.iec.ch. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TS 61400-50-4 has been prepared by of IEC technical committee 88: Wind energy generation systems. It is a Technical Specification.

The text of this Technical Specification is based on the following documents:

Draft	Report on voting
88/1042/DTS	88/1094/RVDTS

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Specification is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts of the IEC 61400 series, under the general title: *Wind energy generation systems*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

WIND ENERGY GENERATION SYSTEMS –

Part 50-4: Use of floating lidar systems for wind measurements

1 Scope

The purpose of this part of IEC 61400, which is a Technical Specification, is to describe procedures and methods which ensure that wind measurements using floating wind lidar systems are carried out and reported consistently and according to best practice. This document does not prescribe the purpose or use case of the wind measurements. However, as this document forms part of the IEC 61400 series of standards and technical specifications, it is anticipated that the wind measurements will be used in relation to some form of wind energy testing or resource assessment.

The scope of this document is limited to vertically profiling wind lidar devices in or on buoys.

This document aims to be applicable to any type and make of floating wind lidar system. The method and requirements provided in this document are independent of the model and type and of the measurement principle and allow application to new types of floating wind lidar systems as these become available.

This part of IEC 61400 aims to describe wind measurements using floating wind lidar with sufficient quality for the use case of wind resource assessment. Readers of this document can consider other use cases that can have other specific requirements.

Detailed guidance on metocean measurements in general is out of the scope of this document.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 61400-1, *Wind turbines – Part 1: Design requirements*

IEC 61400-3-1:2019, *Wind energy generation systems – Part 3-1: Design requirements for fixed offshore wind turbines*

IEC 61400-12-1:2022, *Wind energy generation systems – Part 12-1 Power performance measurements of electricity producing wind turbines*

IEC 61400-12-5:2022, *Wind energy generation systems – Part 12-5 Power performance – Assessment of obstacles and terrain*

IEC 61400-50-1:2022, *Wind energy generation systems – Part 50-1: Wind measurement – Application of meteorological mast, nacelle and spinner mounted instruments*

IEC 61400-50-2:2022, *Wind energy generation systems – Part 50-2: Wind measurement – Application of ground-mounted remote sensing technology*

IEC 61400-50-3:2022, *Wind energy generation systems – Part 50-3: Use of nacelle-mounted lidars for wind measurements*

IEC TS 62600-101, *Marine energy – Wave, tidal and other water current converters – Part 101: Wave energy resource assessment and characterization*
