Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 68, *Financial services*, Subcommittee SC 2, *Financial services, security*.

This fifth edition cancels and replaces the fourth edition (ISO 13491-2:2017), which has been technically revised.

The main changes are as follows:

— an additional subclause, H.5, is added to Annex H and the entire Annex H is reordered for clarity;

— editorially revised.

A list of all parts in the ISO 13491 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

This document specifies both the physical and logical characteristics and the management of the secure cryptographic devices (SCDs) used to protect messages, cryptographic keys and other sensitive information used in a retail financial services environment.

The security of retail financial services is largely dependent upon the security of these cryptographic devices.

Security requirements are based upon the premise that computer files can be accessed and manipulated, communication lines can be "tapped" and authorized data or control inputs in a system device can be replaced with unauthorized inputs. While certain cryptographic devices (e.g., host security modules) reside in relatively high-security processing centres, a large proportion of cryptographic devices used in retail financial services (e.g., PIN entry devices) now reside in non-secure environments. Therefore, when PINs, MACs, cryptographic keys and other sensitive data are processed in these devices, there is a risk that the devices can be tampered with or otherwise compromised to disclose or modify such data.

The risk of financial loss can be reduced through the appropriate use of cryptographic devices that have proper physical and logical security characteristics and are properly managed. To ensure that SCDs have the proper physical and logical security, they require evaluation.

This document provides the security compliance checklists for evaluating SCDs used in financial services systems in accordance with ISO 13491-1. Other evaluation frameworks exist and can be appropriate for formal security evaluations (e.g., ISO/IEC 15408-1, ISO/IEC 15408-2, ISO/IEC 15408-3 and ISO/IEC 19790) but are outside the scope of this document.

Appropriate device characteristics are necessary to ensure that the device has the proper operational capabilities and provides adequate protection for the data it contains. Appropriate device management is necessary to ensure that the device is legitimate, that it has not been modified in an unauthorized manner (e.g., by "bugging") and that any sensitive data placed within the device (e.g., cryptographic keys) have not been subject to disclosure or change.

Absolute security is not practically achievable. Cryptographic security depends upon each life cycle phase of the SCD and the complementary combination of appropriate device management procedures and secure cryptographic characteristics. These management procedures implement preventive measures to reduce the opportunity for a breach of cryptographic device security. These measures aim for a high probability of detection of any illicit access to sensitive or confidential data in the event that device characteristics fail to prevent or detect the security compromise.

Financial services — Secure cryptographic devices (retail) —

Part 2: Security compliance checklists for devices used in financial transactions

1 Scope

This document specifies checklists to be used to evaluate secure cryptographic devices (SCDs) incorporating cryptographic processes as specified in ISO 9564-1, ISO 9564-2, ISO 16609, and ISO 11568 in the financial services environment. Integrated circuit (IC) payment cards are subject to the requirements identified in this document up until the time of issue, after which they are to be regarded as a "personal" device and outside of the scope of this document.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 9564-1, *Financial services — Personal Identification Number (PIN) management and security — Part 1: Basic principles and requirements for PINs in card-based systems*

ISO 11568, *Financial services — Key management (retail)*

ISO 13491-1, *Financial services — Secure cryptographic devices (retail) — Part 1: Concepts, requirements and evaluation methods*

ISO 16609, *Financial services — Requirements for message authentication using symmetric techniques*

ISO/IEC 18031, *Information technology — Security techniques — Random bit generation*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 13491-1 and the following apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

— ISO Online browsing platform: available at https://www.iso.org/obp

— IEC Electropedia: available at https://www.electropedia.org/

3.1
auditor
person or organization approved as an auditor by an approval authority

[SOURCE: ISO 9000:2015, 3.13.15]

3.2
data integrity
assurance that data has not been altered or destroyed in an unauthorized manner

© ISO 2023 – All rights reserved

3.3
dual control
process of utilizing two or more entities (usually persons) operating in concert to protect sensitive functions or information whereby no single entity is able to access or use the materials

Note 1 to entry: A cryptographic key is an example of the type of material to be accessed or utilized.

3.4
evaluation agency
organization trusted by the design, manufacturing, and sponsoring entities which evaluates the secure cryptographic device (using specialist skills and tools)

Note 1 to entry: Evaluation is in accordance with ISO 13491-1.

3.5
exclusive-or
bit-by-bit modulo two addition of binary vectors of equal length

3.6
security compliance checklist
list of auditable claims, organized by device type

Note 1 to entry: Checklist is as specified in this document.

3.7
sensitive state
device condition that provides access to the secure operator interface such that it can only be entered when the device is under dual or multiple control

3.8
sponsor
person or organization that requests a test

[SOURCE: ISO 20088-3:2018, 3.5]

4 Use of security compliance checklists

These checklists shall be used to assess the acceptability of cryptographic equipment upon which the security of the system depends. It is the responsibility of any sponsor, approval authority or accreditation authority, depending on the evaluation method chosen, that adopts some or all of these checklists to:

— approve evaluating agencies for use by suppliers to or participants in the system;

— set up an audit review body to review the completed audit checklists.

Annex A to Annex H, which provide checklists defining the minimum evaluation to be performed to assess the acceptability of cryptographic equipment, shall be applied. Additional tests may be performed to reflect the state of the art at the time of the evaluation.

A cryptographic device achieves security both through its inherent characteristics and the characteristics of the environment in which the device is located. When completing these audit checklists, the environment in which the device is located shall be considered, for example a device intended for use in a public location can require greater inherent security than the equivalent device operating in a controlled environment. So that an evaluating agency need not investigate the specific environment where an evaluated device may reside, this document provides a suggested categorization of environments in Annex H. Thus, an evaluating agency may be asked to evaluate a given device for operation in a specific environment. Such a device can be deployed in a given facility only if this facility itself has been audited to ensure that it provides the ensured environment. However, these audit checklists may be used with categorizations of the environment other than those suggested in Annex H.
