Foreword ..... **v**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**

4 Establishing a sampling scheme **1**
4.1 General 1
4.2 Design of the sampling scheme 2
4.2.1 Material to be sampled 2
4.2.2 Parameters to be determined on samples 2
4.2.3 Division of lots 2
4.2.4 Basis of sampling 2
4.2.5 Precision of sampling 3
4.2.6 Bias of sampling 3
4.3 Precision of results 3
4.3.1 Precision and total variance 3
4.3.2 Primary increment variance 4
4.3.3 Preparation and testing variance 4
4.3.4 Number of sub-lots and number of increments in each sub-lot 5
4.4 Minimum mass of sample 8
4.5 Mass of primary increment 8
4.6 Size analysis 9

5 Methods of sampling **10**
5.1 General 10
5.2 Time-basis sampling 10
5.2.1 Method of taking primary increments 10
5.2.2 Sampling interval 10
5.2.3 Mass of increment 11
5.3 Stratified random sampling 11
5.3.1 General 11
5.3.2 Time-basis stratified random sampling 11
5.4 Reference sampling 11

6 Design of mechanical samplers **11**
6.1 Safety 11
6.2 Sampling system 11
6.2.1 General 11
6.2.2 Checking for precision and bias 12
6.2.3 Operation of sampler 12
6.3 Location of sampling equipment 12
6.4 General requirements for designing mechanical samplers 12
6.5 Design of falling-stream-type samplers 13
6.5.1 General 13
6.5.2 Cutter velocity 16
6.6 Cross-belt-type primary samplers 16
6.6.1 Operation 16
6.6.2 Design of cross-belt samplers 17
6.6.3 Maintenance of sampling equipment 18

7 Handling and storage of samples **19**

8 Sample preparation **19**

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 27, *Coal and coke*, Subcommittee SC 4, *Sampling*.

This third edition cancels and replaces the second edition (ISO 13909-5:2016), which has been technically revised.

The main changes are as follows:

— the title has been modified and aligned with the rest of the ISO 13909 series;

A list of all parts in the ISO 13909 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user’s national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Coal and coke — Mechanical sampling —

Part 5:
Sampling of coke from moving streams

1 Scope

This document specifies procedures and requirements for the design and establishment of sampling schemes for the mechanical sampling of coke from moving streams and the methods of sampling used.

The diversity of types of equipment for sampling and the conditions under which mechanical sampling is performed make it inappropriate to specify standard designs for samplers which will be applicable to all situations.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 13909-1:2025, *Coal and coke — Mechanical sampling — Part 1: General introduction*

ISO 13909-6, *Coal and coke — Mechanical sampling — Part 6: Preparation of test samples of coke*

ISO 13909-7, *Coal and coke — Mechanical sampling — Part 7: Methods for determining the precision of sampling, sample preparation and testing*

ISO 13909-8, *Coal and coke — Mechanical sampling — Part 8: Methods of testing for bias*

ISO 21398, *Hard coal and coke — Guidance to the inspection of mechanical sampling systems*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 13909-1 apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

— ISO Online browsing platform: available at https://www.iso.org/obp

— IEC Electropedia: available at https://www.electropedia.org/

4 Establishing a sampling scheme

4.1 General

The general procedure for establishing a sampling scheme is as follows:

a) define the quality parameters to be determined and the types of samples required;

b) define the lot;

c) define or assume the precision required (see 4.3.1);
