Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: Foreword - Supplementary information

The committee responsible for this document is ISO/TC 72, *Textile machinery and accessories*, Subcommittee SC 1, *Spinning preparatory, spinning, twisting and winding machinery and accessories*.

Textile machinery and accessories — Web roller cards — Terms and definitions

1 Scope

This International Standard defines terms of the card with a web-forming method using staple fibres for non-woven machinery.

2 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

2.1 Basic terms

2.1.1
web roller card
machine for mechanical web formation with at least two working rollers for opening fibre tufts and for producing unconsolidated textile fabric

[SOURCE: *web* (2.3.3)]

2.1.2
work flow direction
direction of fibre flow through machine (material flow)

2.1.3
entry side
side on which the fibre flow enters the machine

2.1.4
delivery side
side on which the fibre flow runs out the machine

2.1.5
right side
side of the machine which, when looking in the direction of the fibre flow, is situated on the right

2.1.6
left side
side of the machine which, when looking in the direction of the fibre flow, is situated on the left
