Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is ISO/IEC JTC 1, *Information technology*, Subcommittee SC 35, *User interfaces*.

ISO/IEC 30122 consists of the following parts, under the general title *Information technology — User interfaces — Voice commands*:

— *Part 1: Framework and general guidance*

— *Part 2: Constructing and testing*

— *Part 3: Translation and localization*

— *Part 4: Management of voice command registration*

Introduction

This part of ISO/IEC 30122 describes supplementary procedural information, requirements and criteria that apply to a collection of voice command standards published as a web-accessible voice command database. It is based on the second paragraph of Annex SL, Procedures for the development and maintenance of standards in database format supplemented to ISO/IEC Directives as Procedures specific to ISO. This part of ISO/IEC 30122 is not in conflict with Annex SL or ISO/IEC Directives.

The advantages of the collection of voice command standards as an electronic database include the following:

— the database represents a serious source one can rely on;

— the database can be easily maintained and updated.

The procedure of voice command standardization is as follows.

a) According to ISO/IEC 30122-1, the person creating the voice command decides the Title and Function attributes of the proposed voice command.

b) According to ISO/IEC 30122-2 and ISO/IEC 30122-3, the person creating the voice command decides the Phrase of command attribute of the proposed voice command in at least one ISO/IEC official language.

c) According to this part of ISO/IEC 30122, VT 30122 validates the appropriateness of the proposed voice command as an international standard. If it is approved as an international standard, the voice command is published as an international standard through the voice command database.

After the standardization, the following procedure may be conducted.

d) According to ISO/IEC 30122-2 and ISO/IEC 30122-3, each country gives attributes of the standardized voice command in each language.

e) According to ISO/IEC 30122-2, each country tests the voice command and speech recognition system in each language.

Part 4: Management of voice command registration

1 Scope

This part of ISO/IEC 30122 defines supplementary procedural information, requirements and criteria that apply to a collection of voice commands published as a web-accessible voice command database. They are based on Annex SL of the IEC supplement to ISO/IEC Directives. This part of ISO/IEC 30122 also defines the method for adding, changing or withdrawing voice commands in an electronic database of standard voice commands.

Annex SL ISO/IEC Directives – Supplement – Procedures Specific to ISO is followed for management of voice command registration unless otherwise specified in this part of ISO/IEC 30122.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 30122-1, *Information technology — User interfaces — Voice commands — Part 1: Framework and general guidance*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

— IEC Electropedia: available at http://www.electropedia.org/

— ISO Online browsing platform: available at http://www.iso.org/obp

3.1
maintenance team
MT
group of experts that may be set up by a parent committee following the rules in the ISO/IEC Directives for the establishment of working groups

Note 1 to entry: The convener of a MT should be the same person as the convener of the validation team (3.2).

Note 2 to entry: The MT may be called upon by the validation team (3.2) convener to provide expertise in the preparation of change requests or voice commands for evaluation or validation.

© ISO/IEC 2016 – All rights reserved

3.2
validation team
VT
permanent, "executive", group of individuals appointed by, and acting as, delegates on behalf of their national bodies, A-liaison organizations and committee-internal liaisons committed to execute evaluation and validation of change requests and vote for their release as part of a web-accessible voice command database

Note 1 to entry: All permanent (P) members, A-liaison organizations and committee-internal liaisons have the right to appoint one member to the team. A validation team comprises a minimum of five P-members. Representatives of P-members have the right to comment and vote; representatives of A-liaisons and committee-internal liaisons do not have the right to vote, but may submit comments.

Note 2 to entry: The described procedure asks for very short response times from the validation team members. Therefore, the national bodies should appoint one or more deputies that can take over the task when the official member is unavailable (due to travel, business, etc.).

Note 3 to entry: The appointing bodies decide on the duration of an appointment. They should also organize any supporting network of experts at national level.

Note 4 to entry: The SC 35 secretariat manages the validation team, which is numbered and called VT 30122, for the web-accessible voice command database.

3.3
proposer
body allowed to submit a change request

Note 1 to entry: The proposer is the body having the right to submit the request in terms of ISO/IEC Directives.

3.4
web-accessible voice command database
database standard
standard in database format for which a valid form of publication is a publicly accessible database, containing the standardized voice commands and non-normative translations (where provided by appropriate national bodies)

Note 1 to entry: The term standards as database may be used as a synonym.

3.5
voice command
<of a database standard>separately identified and managed structured object in a database being composed of spoken instruction to control ICT devices

3.6
change request
CR
task description for addition, withdrawal or change of one or more voice commands in a database standard, submitted by an authorized person or body, which will be reviewed and updated by the convener of a validation team, possibly with the support of a maintenance team, for evaluation and validation by the validation team

Note 1 to entry: It is possible that changes to the database standard resulting from several change requests are combined, or that a single change request is subdivided, at any stage in the process.

3.7
work package
set of one or more voice commands associated with a change request

© ISO/IEC 2016 – All rights reserved
