Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO/IEC documents should be noted.

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents) or the IEC list of patent declarations received (see patents.iec.ch).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

ISO/IEC/IEEE 8802-3:2021/Amd.1 was prepared by the LAN/MAN of the IEEE Computer Society (as IEEE Std 802.3cb-2018) and drafted in accordance with its editorial rules. It was adopted, under the "fast-track procedure" defined in the Partner Standards Development Organization cooperation agreement between ISO and IEEE, by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 6, *Telecommunications and information exchange between systems*.

A list of all parts in the ISO/IEC/IEEE 8802 series can be found on the ISO and IEC websites.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

IEEE Std 802.3cb™-2018
(Amendment to IEEE Std 802.3™-2018)

IEEE Standard for Ethernet

Amendment 1: Physical Layer Specifications and Management Parameters for 2.5 Gb/s and 5 Gb/s Operation over Backplane

Sponsor

LAN/MAN Standards Committee
of the
IEEE Computer Society

Approved 27 September 2018

IEEE-SA Standards Board

Abstract: Ethernet Media Access Control (MAC) parameters, Physical Layer specifications, and management objects for the serial transfer of Ethernet format frames at 2.5 Gb/s and 5 Gb/s over electrical backplanes are defined in this amendment to IEEE Std 802.3-2018.

Keywords: 2.5 Gigabit Ethernet, 5 Gigabit Ethernet, 2.5GBASE-KX, 2.5GBASE-X, 5GBASE-KR, 5GBASE-R, amendment, AN, Auto-Negotiation, Backplane Ethernet, BASE-R, BASE-X, EEE, Energy Efficient Ethernet, Ethernet, IEEE 802.3™, IEEE 802.3cb™

Important Notices and Disclaimers Concerning IEEE Standards Documents

IEEE documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page, appear in all standards and may be found under the heading "Important Notices and Disclaimers Concerning IEEE Standards Documents." They can also be obtained on request from IEEE or viewed at http://standards.ieee.org/ipr/disclaimers.html.

Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents

IEEE Standards documents (standards, recommended practices, and guides), both full-use and trial-use, are developed within IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association ("IEEE-SA") Standards Board. IEEE ("the Institute") develops its standards through a consensus development process, approved by the American National Standards Institute ("ANSI"), which brings together volunteers representing varied viewpoints and interests to achieve the final product. IEEE Standards are documents developed through scientific, academic, and industry-based technical working groups. Volunteers in IEEE working groups are not necessarily members of the Institute and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE Standards do not guarantee or ensure safety, security, health, or environmental protection, or ensure against interference with or from other devices or networks. Implementers and users of IEEE Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.

IEEE does not warrant or represent the accuracy or content of the material contained in its standards, and expressly disclaims all warranties (express, implied and statutory) not included in this or any other document relating to the standard, including, but not limited to, the warranties of: merchantability; fitness for a particular purpose; non-infringement; and quality, accuracy, effectiveness, currency, or completeness of material. In addition, IEEE disclaims any and all conditions relating to: results; and workmanlike effort. IEEE standards documents are supplied "AS IS" and "WITH ALL FAULTS."

Use of an IEEE standard is wholly voluntary. The existence of an IEEE standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

Translations

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE should be considered the approved IEEE standard.

Official statements

A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, or be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position of IEEE.

Comments on standards

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE. However, IEEE does not provide consulting information or advice pertaining to IEEE Standards documents. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to comments or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in revisions to an IEEE standard is welcome to join the relevant IEEE working group.

Comments on standards should be submitted to the following address:

Secretary, IEEE-SA Standards Board
445 Hoes Lane
Piscataway, NJ 08854 USA

Laws and regulations

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

Copyrights

IEEE draft and approved standards are copyrighted by IEEE under U.S. and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, IEEE does not waive any rights in copyright to the documents.

Photocopies

Subject to payment of the appropriate fee, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Copyright © 2019 IEEE. All rights reserved.

Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every ten years. When a document is more than ten years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE-SA Website at http://ieeexplore.ieee.org or contact IEEE at the address listed previously. For more information about the IEEE SA or IEEE's standards development process, visit the IEEE-SA Website at http://standards.ieee.org.

Errata

Errata, if any, for all IEEE standards can be accessed on the IEEE-SA Website at the following URL: http://standards.ieee.org/findstds/errata/index.html. Users are encouraged to check this URL for errata periodically.

Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE-SA Website at http://standards.ieee.org/about/sasb/patcom/patents.html. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

Introduction

This introduction is not part of IEEE Std 802.3cb-2018, IEEE Standard for Ethernet—Amendment 1: Physical Layer Specifications and Management Parameters for 2.5 Gb/s and 5 Gb/s Operation over Backplane.

IEEE Std 802.3™ was first published in 1985. Since the initial publication, many projects have added functionality or provided maintenance updates to the specifications and text included in the standard. Each IEEE 802.3 project/amendment is identified with a suffix (e.g., IEEE Std 802.3ba™-2010).

The half duplex Media Access Control (MAC) protocol specified in IEEE Std 802.3-1985 is Carrier Sense Multiple Access with Collision Detection (CSMA/CD). This MAC protocol was key to the experimental Ethernet developed at Xerox Palo Alto Research Center, which had a 2.94 Mb/s data rate. Ethernet at 10 Mb/s was jointly released as a public specification by Digital Equipment Corporation (DEC), Intel and Xerox in 1980. Ethernet at 10 Mb/s was approved as an IEEE standard by the IEEE Standards Board in 1983 and subsequently published in 1985 as IEEE Std 802.3-1985. Since 1985, new media options, new speeds of operation, and new capabilities have been added to IEEE Std 802.3. A full duplex MAC protocol was added in 1997.

Some of the major additions to IEEE Std 802.3 are identified in the marketplace with their project number. This is most common for projects adding higher speeds of operation or new protocols. For example, IEEE Std 802.3u™ added 100 Mb/s operation (also called Fast Ethernet), IEEE Std 802.3z added 1000 Mb/s operation (also called Gigabit Ethernet), IEEE Std 802.3ae added 10 Gb/s operation (also called 10 Gigabit Ethernet), IEEE Std 802.3ah™ specified access network Ethernet (also called Ethernet in the First Mile) and IEEE Std 802.3ba added 40 Gb/s operation (also called 40 Gigabit Ethernet) and 100 Gb/s operation (also called 100 Gigabit Ethernet). These major additions are all now included in and are superseded by IEEE Std 802.3-2018 and are not maintained as separate documents.

At the date of publication for IEEE Std 802.3cb-2018, IEEE Std 802.3 was composed of the following documents:

IEEE Std 802.3-2018

Section One—Includes Clause 1 through Clause 20 and Annex A through Annex H and Annex 4A. Section One includes the specifications for 10 Mb/s operation and the MAC, frame formats and service interfaces used for all speeds of operation.

Section Two—Includes Clause 21 through Clause 33 and Annex 22A through Annex 33E. Section Two includes management attributes for multiple protocols and speed of operation as well as specifications for providing power over twisted pair cabling for multiple operational speeds. It also includes general information on 100 Mb/s operation as well as most of the 100 Mb/s Physical Layer specifications.

Section Three—Includes Clause 34 through Clause 43 and Annex 36A through Annex 43C. Section Three includes general information on 1000 Mb/s operation as well as most of the 1000 Mb/s Physical Layer specifications.

Section Four—Includes Clause 44 through Clause 55 and Annex 44A through Annex 55B. Section Four includes general information on 10 Gb/s operation as well as most of the 10 Gb/s Physical Layer specifications.

Section Five—Includes Clause 56 through Clause 77 and Annex 57A through Annex 76A. Clause 56 through Clause 67 and Clause 75 through Clause 77, as well as associated annexes, specify subscriber access and other Physical Layers and sublayers for operation from 512 kb/s to 10 Gb/s, and defines

Copyright © 2019 IEEE. All rights reserved.

services and protocol elements that enable the exchange of IEEE Std 802.3 format frames between stations in a subscriber access network. Clause 68 specifies a 10 Gb/s Physical Layer specification. Clause 69 through Clause 74 and associated annexes specify Ethernet operation over electrical backplanes at speeds of 1000 Mb/s and 10 Gb/s.

Section Six—Includes Clause 78 through Clause 95 and Annex 83A through Annex 93C. Clause 78 specifies Energy-Efficient Ethernet. Clause 79 specifies IEEE 802.3 Organizationally Specific Link Layer Discovery Protocol (LLDP) type, length, and value (TLV) information elements. Clause 80 through Clause 95 and associated annexes includes general information on 40 Gb/s and 100 Gb/s operation as well the 40 Gb/s and 100 Gb/s Physical Layer specifications. Clause 90 specifies Ethernet support for time synchronization protocols.

Section Seven—Includes Clause 96 through Clause 115 and Annex 97A through Annex 115A. Clause 96 through Clause 98, Clause 104, and associated annexes, specify Physical Layers and optional features for 100 Mb/s and 1000 Mb/s operation over a single twisted pair. Clause 100 through Clause 103, as well as associated annexes, specify Physical Layers for the operation of the EPON protocol over coaxial distribution networks. Clause 105 through Clause 114 and associated annexes include general information on 25 Gb/s operation as well as 25 Gb/s Physical Layer specifications. Clause 99 specifies a MAC merge sublayer for the interspersing of express traffic. Clause 115 and its associated annex specify a Physical Layer for 1000 Mb/s operation over plastic optical fiber.

Section Eight—Includes Clause 116 through Clause 126 and Annex 119A through Annex 120E. Clause 116 through Clause 124 and associated annexes include general information on 200 Gb/s and 400 Gb/s operation as well the 200 Gb/s and 400 Gb/s Physical Layer specifications. Clause 125 and Clause 126 include general information on 2.5 Gb/s and 5 Gb/s operation as well as 2.5 Gb/s and 5 Gb/s Physical Layer specifications.

IEEE Std 802.3cb-2018

Amendment 1—This amendment includes changes to IEEE Std 802.3-2018 and its amendments, and adds Clause 127 through Clause 130, Annex 127A, Annex 128A, Annex 128B, and Annex 130A. This amendment adds new Physical Layers for operation at 2.5 Gb/s and 5 Gb/s over electrical backplanes.

Two companion documents exist, IEEE Std 802.3.1 and IEEE Std 802.3.2. IEEE Std 802.3.1 describes Ethernet management information base (MIB) modules for use with the Simple Network Management Protocol (SNMP). IEEE Std 802.3.2 describes YANG data models for Ethernet. IEEE Std 802.3.1 and IEEE Std 802.3.2 are updated to add management capability for enhancements to IEEE Std 802.3 after approval of those enhancements.

IEEE Std 802.3 will continue to evolve. New Ethernet capabilities are anticipated to be added within the next few years as amendments to this standard.

45.2.3.11 EEE control and capability 2 register (Register 3.21) 33
45.2.3.11.a 5GBASE-KR EEE supported (3.21.8) 33
45.2.3.11.b 2.5GBASE-KX EEE supported (3.21.7) 33
45.2.3.15 BASE-R and MultiGBASE-T PCS status 1 register (Register 3.32) 33
45.2.3.15.1 BASE-R and MultiGBASE-T receive link status (3.32.12) 33
45.2.3.15.4 BASE-R and MultiGBASE-T PCS high BER (3.32.1) 34
45.2.3.15.5 BASE-R and MultiGBASE-T PCS block lock (3.32.0) 34
45.2.3.16 BASE-R and MultiGBASE-T PCS status 2 register (Register 3.33) 34
45.2.3.16.1 Latched block lock (3.33.15) 34
45.2.3.16.2 Latched high BER (3.33.14) 34
45.2.3.16.3 BER(3.33.13:8) 34
45.2.3.16.4 Errored blocks (3.33.7:0) 35
45.2.3.17 5/10/25GBASE-R PCS test pattern seed A (Registers 3.34 through 3.37) 35
45.2.3.18 5/10/25GBASE-R PCS test pattern seed B (Registers 3.38 through 3.41) 35
45.2.7 Auto-Negotiation registers 35
45.2.7.2 AN status (Register 7.1) 35
45.2.7.2.1 Parallel detection fault (7.1.9) 35
45.2.7.12 Backplane Ethernet, BASE-R copper status (Register 7.48) 36
45.2.7.12.3 Negotiated Port Type (7.48.1, 7.48.2, 7.48.3, 7.48.5, 7.48.6, 7.48.8, 7.48.9, 7.48.10, 7.48.11, 7.48.12, 7.48.13, 7.48.14, 7.48.15) 36
45.2.7.15 EEE advertisement 2 (Register 7.62) 36
45.2.7.15.a 5GBASE-KR EEE (7.62.3) 37
45.2.7.15.b 2.5GBASE-KX EEE (7.62.2) 37
45.2.7.16 EEE link partner ability 2 (Register 7.63) 37
45.5 Protocol implementation conformance statement (PICS) proforma for Clause 45, Management Data Input/Output (MDIO) interface 38
45.5.3 PICS proforma tables for the Management Data Input Output (MDIO) interface 38
45.5.3.2 PMA/PMD MMD options 38
45.5.3.3 PMA/PMD management functions 38
45.5.3.6 PCS options 38

46. Reconciliation Sublayer (RS) and 10 Gigabit Media Independent Interface (XGMII) 39

46.3 XGMII functional specifications 39
46.3.3 Error and fault handling 39
46.3.3.3 Response to received invalid frame sequences 39

69. Introduction to Ethernet operation over electrical backplanes 40

69.1 Overview 40
69.1.1 Scope 40
69.1.2 Relationship of Backplane Ethernet to the ISO OSI reference model 40
69.2 Summary of Backplane Ethernet Sublayers 41
69.2.3 Physical Layer signaling systems 41
69.3 Delay constraints 42
69.5 Protocol implementation conformance statement (PICS) proforma 42

70. Physical Medium Dependent sublayer and baseband medium, type 1000BASE-KX 43

70.5 PMD MDIO function mapping 43

73. Auto-Negotiation for backplane and copper cable assembly 44

73.2 Relationship to the ISO/IEC Open Systems Interconnection (OSI) reference model 44

73.6.4 Technology Ability Field 44
73.7 Receive function requirements 45
73.7.4 Arbitration function requirements 45
73.7.4.1 Parallel Detection function 45
73.7.6 Priority Resolution function 45
73.10 State diagrams and variable definitions 46
73.10.1 State diagram variables 46
73.10.2 State diagram timers 46
73.11 Protocol implementation conformance statement (PICS) proforma for Clause 73, Auto-Negotiation for backplane and copper cable assembly 47
73.11.4 PICS proforma tables for Auto-Negotiation for backplane and copper cable assembly 47
73.11.4.4 Receive function requirements 47

78. Energy-Efficient Ethernet (EEE) 48

78.1 Overview 48
78.1.1 LPI Signaling 48
78.1.4 PHY types optionally supporting EEE 48
78.2 LPI mode timing parameters description 48
78.5 Communication link access latency 49

125. Introduction to 2.5 Gb/s and 5 Gb/s networks 50

125.1 Overview 50
125.1.2 Relationship of 2.5 Gigabit and 5 Gigabit Ethernet to the ISO OSI reference model 50
125.1.3 Nomenclature 50
125.1.4 Physical Layer signaling systems 51
125.2 Summary of 2.5 Gigabit and 5 Gigabit Ethernet sublayers 52
125.2.2 Physical coding sublayer (PCS) 52
125.2.3 Physical Medium Attachment sublayer (PMA) 52
125.2.4 Auto-Negotiation~~, type BASE-T~~ 52
125.2.4.1 Auto-Negotiation, type BASE-T 52
125.2.4.2 Auto-Negotiation, type Backplane 53
125.3 Delay Constraints 53

127. Physical Coding Sublayer (PCS) and Physical Medium Attachment (PMA) sublayer for 2.5 Gb/s 8B/10B 2.5GBASE-X 54

127.1 Overview 54
127.1.1 Scope 54
127.1.2 Relationship of 2.5GBASE-X to other standards 54
127.1.3 Summary of 2.5GBASE-X sublayers 54
127.1.3.1 Physical Coding Sublayer (PCS) 54
127.1.3.2 Physical Medium Attachment (PMA) sublayer 54
127.1.3.3 Physical Medium Attachment (PMA) service interface rates 55
127.1.4 Inter-sublayer interfaces 55
127.1.5 Functional block diagram 56
127.2 Physical Coding Sublayer (PCS) 56
127.2.1 PCS Interface (XGMII) 56
127.2.2 Functions within the PCS 57
127.2.3 PCS used with 2.5GBASE-KX PMD 57
127.2.4 Use of code-groups 58
127.2.5 XGMII to 2.5GPII mapping 58

130.10.4.4 PMD Transmitter electrical characteristics 143
130.10.4.5 Receiver electrical characteristics 144
130.10.4.6 Environmental specifications 144

Annex 31B (normative) MAC Control PAUSE operation 145

31B.3 Detailed specification of PAUSE operation 145
31B.3.7 Timing considerations for PAUSE operation 145
31B.4 Protocol implementation conformance statement (PICS) proforma for MAC Control PAUSE operation 146
31B.4.3 Major capabilities/options 146
31B.4.6 PAUSE command MAC timing considerations 146

Annex 69A (normative) Interference tolerance testing 147

69A.1 Introduction 147
69A.2 Test setup 147
69A.2.1 Pattern generator 147
69A.2.2 Test channel 148
69A.2.4 Transmitter control 148
69A.3 Test methodology 148

Annex 69B (normative) Interconnect characteristics 149

69B.4 Channel parameters 149
69B.4.1 Overview 149
69B.4.2 Fitted attenuation 149
69B.4.3 Insertion loss 151
69B.4.4 Insertion loss deviation 153
69B.4.5 Return loss 155
69B.4.6 Crosstalk 156
69B.4.6.4 Insertion loss to crosstalk ratio (ICR) 156

Annex 127A (informative) Compatibility of 2.5GBASE-X PCS/PMA with 1000BASE-X PCS/PMA running 2.5 times faster 158

Annex 128A (normative) 2.5 Gb/s Storage Enclosure Interface (2.5GSEI) 159

128A.1 Overview 159
128A.1.1 Bit error ratio 161
128A.2 2.5GSEI compliance point definitions 161
128A.3 2.5GSEI electrical characteristics 164
128A.3.1 2.5GSEI host output characteristics 164
128A.3.1.1 Signaling rate and range 164
128A.3.1.2 Signaling levels 165
128A.3.1.3 Output return loss 165
128A.3.1.4 Transmit jitter test requirements 166
128A.3.1.5 Transmit jitter 166
128A.3.1.6 Transmitter output noise and distortion 166
128A.3.2 2.5GSEI host input characteristics 167
128A.3.2.1 Input differential return loss 167
128A.3.2.2 Receiver interference tolerance 167
128A.3.2.3 Receiver jitter tolerance 169
128A.3.3 2.5GSEI drive output characteristics 170

128A.3.4 2.5GSEI drive input characteristics 171
128A.3.4.1 Input differential return loss 171
128A.3.4.2 Receiver interference tolerance 171
128A.3.4.3 Receiver jitter tolerance 172
128A.4 Protocol implementation conformance statement (PICS) proforma for Annex 128A, 2.5 Gb/s Storage Enclosure Interface (2.5GSEI) 174
128A.4.1 Introduction 174
128A.4.2 Identification 174
128A.4.2.1 Implementation identification 174
128A.4.2.2 Protocol summary 174
128A.4.3 Major capabilities/options 175
128A.4.4 PICS proforma tables for 2.5 Gb/s Storage Enclosure Interface (2.5GSEI) 175
128A.4.4.1 Host output functions 175
128A.4.4.2 Host input functions 175
128A.4.4.3 Drive output functions 176
128A.4.4.4 Drive input functions 176

Annex 128B (normative) Test fixtures for 2.5 Gb/s and 5 Gb/s Storage Enclosure Interfaces 177

128B.1 Host and drive compliance boards 177
128B.1.1 Test fixture return loss 177
128B.1.2 Test fixture insertion loss 177
128B.2 Mated test fixtures 178
128B.2.1 Mated test fixtures insertion loss 179
128B.2.2 Mated test fixtures return loss 179
128B.2.3 Mated test fixtures integrated crosstalk noise 180
128B.2.3.1 Mated test fixture near-end crosstalk (NEXT) loss 180
128B.3 Protocol implementation conformance statement (PICS) proforma for Annex 128B, Test fixtures for 2.5 Gb/s and 5 Gb/s Storage Enclosure Interfaces 182
128B.3.1 Introduction 182
128B.3.2 Identification 182
128B.3.2.1 Implementation identification 182
128B.3.2.2 Protocol summary 182
128B.3.3 Major capabilities/options 183
128B.3.4 PICS proforma tables for test fixtures 183
128B.3.4.1 Management functions 183

Annex 130A (normative) 5 Gb/s Storage Enclosure Interface (5GSEI) 184

130A.1 Overview 184
130A.1.1 Bit error ratio 186
130A.2 5GSEI compliance point definitions 186
130A.3 5GSEI electrical characteristics 189
130A.3.1 5GSEI host output characteristics 189
130A.3.1.1 Signaling rate and range 189
130A.3.1.2 Signaling levels 190
130A.3.1.3 Output return loss 190
130A.3.1.4 Transmitter output waveform 191
130A.3.1.4.1 Linear fit to the measured waveform 191
130A.3.1.4.2 Steady-state voltage and linear fit pulse peak 191
130A.3.1.4.3 Pre-cursor coefficient 191
130A.3.1.5 Transmit jitter test requirements 192
130A.3.1.6 Transmit jitter 192
130A.3.1.7 Transmitter output noise and distortion 192

IEEE Standard for Ethernet

Amendment 1: Physical Layer Specifications and Management Parameters for 2.5 Gb/s and 5 Gb/s Operation over Backplane

[This amendment is based on IEEE Std 802.3™-2018.]

NOTE—The editing instructions contained in this amendment define how to merge the material contained therein into the existing base standard and its amendments to form the comprehensive standard.

The editing instructions are shown in bold italic. Four editing instructions are used: change, delete, insert, and replace. ***Change*** is used to make corrections in existing text or tables. The editing instruction specifies the location of the change and describes what is being changed by using ~~strikethrough~~ (to remove old material) and underscore (to add new material). ***Delete*** removes existing material. ***Insert*** adds new material without disturbing the existing material. Deletions and insertions may require renumbering. If so, renumbering instructions are given in the editing instruction. ***Replace*** is used to make changes in figures or equations by removing the existing figure or equation and replacing it with a new one. Editing instructions, change markings, and this NOTE will not be carried over into future editions because the changes will be incorporated into the base standard.

Cross references that refer to clauses, tables, equations, or figures not covered by this amendment are highlighted in green.[1]

[1] Notes in text, tables, and figures are given for information only and do not contain requirements needed to implement the standard.

1. Introduction

1.3 Normative references

Insert the following new reference (for SFF-8482 connector) in alphanumerical order:

SFF-8482, Specification for Serial Attachment 2X Unshielded Connector.[2]

1.4 Definitions

Insert the following new definition (for 2.5GBASE-KX) after 1.4.81 1G-EPON:

1.4.81a 2.5GBASE-KX: IEEE 802.3 Physical Layer specification for 2.5 Gb/s using 2.5GBASE-X encoding over an electrical backplane. (See IEEE Std 802.3, Clause 128.)

Insert the following new definitions (for 2.5GBASE-X, 2.5GPII, and 2.5GSEI) after 1.4.82 2.5GBASE-T:

1.4.82a 2.5GBASE-X: IEEE 802.3 physical coding and physical medium attachment for serial 2.5 Gb/s operation. (See IEEE Std 802.3, Clause 127.)

1.4.82b 2.5GPII: The 2.5 Gb/s PCS Internal Interface is a logical interface that is internal to the 2.5GBASE-X PCS and exists solely for the purposes of defining the 2.5GBASE-X PCS functionality. (See IEEE Std 802.3, 127.2.5.1.)

1.4.82c 2.5GSEI: The 2.5 Gb/s Interface from storage sub-system or bridge subsystem onto backplane (See IEEE Std 802.3, Annex 128A.)

Insert the following new definitions (for 5GBASE-KR and 5GBASE-R) after 1.4.128 4D-PAM5:

1.4.128a 5GBASE-KR: IEEE 802.3 Physical Layer specification for 5 Gb/s using 5GBASE-R encoding over an electrical backplane. (See IEEE Std 802.3, Clause 130.)

1.4.128b 5GBASE-R: An IEEE 802.3 physical coding sublayer and physical medium attachment sublayer for serial 5 Gb/s operation. (See IEEE Std 802.3, Clause 129.)

Insert the following new definition (for 5GSEI) after 1.4.129 5GBASE-T:

1.4.129a 5GSEI: The 5 Gb/s Interface from storage sub-system or bridge subsystem onto backplane (See IEEE Std 802.3, Annex 130A.)

Change 1.4.150 as shown:

1.4.150 BASE-R: An IEEE 802.3 family of Physical Layer devices using 64B/66B encoding defined in Clause 49, Clause 82, Clause 107, ~~or~~ Clause 119, or Clause 129 of IEEE Std 802.3. ~~(See IEEE Std 802.3, Clause 49, Clause 82, Clause 107, Clause 119).~~
