Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT), see the following URL: Foreword — Supplementary information.

This corrected version of ISO/IEC TR 19759:2015 incorporates the following corrections:

- corrupted paragraphs of text within the document have been replaced.

ISO/IEC TR 19759 was prepared by the IEEE Computer Society and was adopted, under a special “fast-track procedure”, by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, in parallel with its approval by national bodies of ISO and IEC.

Introduction

The purpose of the Guide to the Software Engineering Body of Knowledge is to provide a consensually validated characterization of the bounds of the software engineering discipline and to provide a topical access to the Body of Knowledge supporting that discipline. The Body of Knowledge is subdivided into fifteen software engineering Knowledge Areas (KA) providing an outline of topics. The descriptions in the KAs are designed to discriminate among the various important concepts, permitting readers to find their way quickly to subjects of interest. Upon finding a subject, readers are referred to key papers or books selected because they succinctly present the knowledge.

Publication of the 2004 version of this Guide to the Software Engineering Body of Knowledge (SWEBOK 2004)—adopted as ISO/IEC TR 19759:2005—was a major milestone in establishing software engineering as a recognized engineering discipline. The goal in developing this update to SWEBOK is to improve the currency, readability, consistency, and usability of the Guide. All knowledge areas (KAs) have been updated to reflect changes in software engineering since publication of SWEBOK 2004. Four new foundation KAs and a Software Engineering Professional Practices KA have been added. The Software Engineering Tools and Methods KA has been revised as Software Engineering Models and Methods. Software engineering tools is now a topic in each of the KAs. Three appendices provide the specifications for the KA description, an annotated set of relevant standards for each KA, and a listing of the references cited in the Guide.

An emphasis on engineering practice leads the Guide toward a strong relationship with the normative literature. Most of the computer science, information technology and software engineering literature provides information useful to software engineers, but a relatively small portion is normative. A normative document prescribes what an engineer should do in a specified situation rather than providing information that might be helpful. The normative literature is validated by consensus formed among practitioners and is concentrated in standards and related documents. From the beginning, the SWEBOK project was conceived as having a strong relationship to the normative literature of software engineering. The two major standards bodies for software engineering (IEEE Computer Society Software and Systems Engineering Standards Committee and ISO/IEC JTC1/SC7) cooperated in the project.

The Guide is oriented toward a variety of audiences, all over the world. It aims to serve public and private organizations in need of a consistent view of software engineering for defining education and training requirements, classifying jobs, developing performance evaluation policies or specifying software development tasks. It also addresses practicing, or managing, software engineers and the officials responsible for making public policy regarding licensing and professional guidelines. In addition, professional societies and educators defining the certification rules, accreditation policies for university curricula, and guidelines for professional practice will benefit from the SWEBOK Guide, as well as the students learning the software engineering profession and educators and trainers engaged in defining curricula and course content.

Software Engineering — Guide to the Software Engineering Body of Knowledge (SWEBOK) — Version 3.0

1 Scope

This Technical report characterizes the boundaries of the software engineering discipline and provides topical access to the literature supporting that discipline.

2 Recommendations

As a Technical Report, this document does not make technical recommendations. The information provided is that contained in the following publication (reproduced on the following pages), which is adopted as a Technical Report:

Guide to the Software Engineering Body of Knowledge (SWEBOK) V3.0, IEEE Computer Society

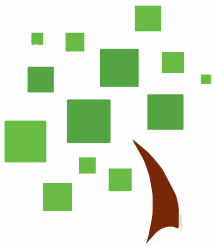

3 Revision of the IEEE Computer Society Publication

It has been agreed with the IEEE Computer Society that ISO/IEC JTC 1/SC 7 will be consulted in the event of any revision or amendment of this IEEE Computer Society publication. Consultation will be accomplished by the existing Category A liaison relationship between SC 7 and IEEE Computer Society.

4.6. Cost-Effectiveness Analysis *12-13*
4.7. Break-Even Analysis *12-13*
4.8. Business Case *12-13*
4.9. Multiple Attribute Evaluation *12-14*
4.10. Optimization Analysis *12-14*
5. Practical Considerations 12-14
5.1. The "Good Enough" Principle *12-14*
5.2. Friction-Free Economy *12-15*
5.3. Ecosystems *12-15*
5.4. Offshoring and Outsourcing *12-15*
Matrix of Topics vs. Reference Material 12-16

Chapter 13: Computing Foundations **13-1**
1. Problem Solving Techniques 13-3
1.1. Definition of Problem Solving *13-3*
1.2. Formulating the Real Problem *13-3*
1.3. Analyze the Problem *13-3*
1.4. Design a Solution Search Strategy *13-3*
1.5. Problem Solving Using Programs *13-3*
2. Abstraction 13-4
2.1. Levels of Abstraction *13-4*
2.2. Encapsulation *13-4*
2.3. Hierarchy *13-4*
2.4. Alternate Abstractions *13-5*
3. Programming Fundamentals 13-5
3.1. The Programming Process *13-5*
3.2. Programming Paradigms *13-5*
4. Programming Language Basics 13-6
4.1. Programming Language Overview *13-6*
4.2. Syntax and Semantics of Programming Languages *13-6*
4.3. Low-Level Programming Languages *13-7*
4.4. High-Level Programming Languages *13-7*
4.5. Declarative vs. Imperative Programming Languages *13-7*
5. Debugging Tools and Techniques 13-8
5.1. Types of Errors *13-8*
5.2. Debugging Techniques *13-8*
5.3. Debugging Tools *13-8*
6. Data Structure and Representation 13-9
6.1. Data Structure Overview *13-9*
6.2. Types of Data Structure *13-9*
6.3. Operations on Data Structures *13-9*
7. Algorithms and Complexity 13-10
7.1. Overview of Algorithms *13-10*
7.2. Attributes of Algorithms *13-10*
7.3. Algorithmic Analysis *13-10*
7.4. Algorithmic Design Strategies *13-11*
7.5. Algorithmic Analysis Strategies *13-11*
8. Basic Concept of a System 13-11
8.1. Emergent System Properties *13-11*

8.2. Systems Engineering *13-12*
8.3. Overview of a Computer System *13-12*
9. Computer Organization 13-13
9.1. Computer Organization Overview *13-13*
9.2. Digital Systems *13-13*
9.3. Digital Logic *13-13*
9.4. Computer Expression of Data *13-13*
9.5. The Central Processing Unit (CPU) *13-14*
9.6. Memory System Organization *13-14*
9.7. Input and Output (I/O) *13-14*
10. Compiler Basics 13-15
10.1. Compiler/Interpreter Overview *13-15*
10.2. Interpretation and Compilation *13-15*
10.3. The Compilation Process *13-15*
11. Operating Systems Basics 13-16
11.1. Operating Systems Overview *13-16*
11.2. Tasks of an Operating System *13-16*
11.3. Operating System Abstractions *13-17*
11.4. Operating Systems Classification *13-17*
12. Database Basics and Data Management 13-17
12.1. Entity and Schema *13-18*
12.2. Database Management Systems (DBMS) *13-18*
12.3. Database Query Language *13-18*
12.4. Tasks of DBMS Packages *13-18*
12.5. Data Management *13-19*
12.6. Data Mining *13-19*
13. Network Communication Basics 13-19
13.1. Types of Network *13-19*
13.2. Basic Network Components *13-19*
13.3. Networking Protocols and Standards *13-20*
13.4. The Internet *13-20*
13.5. Internet of Things *13-20*
13.6. Virtual Private Network (VPN) *13-21*
14. Parallel and Distributed Computing 13-21
14.1. Parallel and Distributed Computing Overview *13-21*
14.2. Difference between Parallel and Distributed Computing *13-21*
14.3. Parallel and Distributed Computing Models *13-21*
14.4. Main Issues in Distributed Computing *13-22*
15. Basic User Human Factors 13-22
15.1. Input and Output *13-22*
15.2. Error Messages *13-23*
15.3. Software Robustness *13-23*
16. Basic Developer Human Factors 13-23
16.1. Structure *13-24*
16.2. Comments *13-24*
17. Secure Software Development and Maintenance 13-24
17.1. Software Requirements Security *13-24*
17.2. Software Design Security *13-25*
17.3. Software Construction Security *13-25*
17.4. Software Testing Security *13-25*

17.5. Build Security into Software Engineering Process *13-25*
17.6. Software Security Guidelines *13-25*
Matrix of Topics vs. Reference Material 13-27

Chapter 14: Mathematical Foundations **14-1**
1. Set, Relations, Functions 14-1
1.1. Set Operations *14-2*
1.2. Properties of Set *14-3*
1.3. Relation and Function *14-4*
2. Basic Logic 14-5
2.1. Propositional Logic *14-5*
2.2. Predicate Logic *14-5*
3. Proof Techniques 14-6
3.1. Methods of Proving Theorems *14-6*
4. Basics of Counting 14-7
5. Graphs and Trees 14-8
5.1. Graphs *14-8*
5.2. Trees *14-10*
6. Discrete Probability 14-13
7. Finite State Machines 14-14
8. Grammars 14-15
8.1. Language Recognition *14-16*
9. Numerical Precision, Accuracy, and Errors 14-17
10. Number Theory 14-18
10.1. Divisibility *14-18*
10.2. Prime Number, GCD *14-19*
11. Algebraic Structures 14-19
11.1. Group *14-19*
11.2. Rings *14-20*
Matrix of Topics vs. Reference Material 14-21

Chapter 15: Engineering Foundations **15-1**
1. Empirical Methods and Experimental Techniques 15-1
1.1. Designed Experiment *15-1*
1.2. Observational Study *15-2*
1.3. Retrospective Study *15-2*
2. Statistical Analysis 15-2
2.1. Unit of Analysis (Sampling Units), Population, and Sample *15-2*
2.2. Concepts of Correlation and Regression *15-5*
3. Measurement 15-5
3.1. Levels (Scales) of Measurement *15-6*
3.2. Direct and Derived Measures *15-7*
3.3. Reliability and Validity *15-8*
3.4. Assessing Reliability *15-8*
4. Engineering Design 15-8
4.1. Engineering Design in Engineering Education *15-8*
4.2. Design as a Problem Solving Activity *15-9*
4.3. Steps Involved in Engineering Design *15-9*
5. Modeling, Simulation, and Prototyping 15-10
5.1. Modeling *15-10*
